The Human Animal The Mystery Of Mans Behaviour:

The Human Animal Hans Hass, John Maxwell Brownjohn, 1973 **The Human Animal** Hans Hass, 1970 Wir Menschen: das Geheimnis unseres Verhaltens. The human animal: the mystery of man's behaviour. (Translated ... by J. Maxwell Brownjohn.). Hans Hass, 1970 **The Evolved Structure of Human Social Behaviour and Personality** Ralf-Peter Behrendt, 2018-04-17 This book concerned with psychoanalytic conceptualisations helps to lay the foundation for a biologically and evolutionarily sensible model of human social behaviour and personality and also helps to bridge the gap between psychoanalysis and neuroscience **The human animal** Hans Hass, 1970 **The Limits of Political Belonging** Mark Edwards, 2016-04-29 Citizenship is increasingly the core concept by which human belonging is defined but do we really understand what it is This book develops an evolutionist argument to challenge accepted ideas about citizenship and question how well it fits between political prescriptions for sociality and human nature Narcissism and the Self R. Behrendt, 2015-02-03 The book examines how coevolved intraspecific aggression and appeasement gestures can give rise to complex social cultural and psychopathological phenomena It argues that the individual s need regulate narcissistic supplies and maintain feelings of safety is the overriding determinant of human conduct and thought in mental health and illness

Self-Preservation at the Centre of Personality Ralf-Peter Behrendt, 2020-10-06 The book discusses personality as a unified set of evolved and culturally developed structures that serves a single and definable purpose to maintain the individual s safety in the context of dyadic relationships group processes and more abstract and fluid social configurations The infant mother relationship remains the blueprint for modes of relating to the social surround at whatever level of complexity and for approximating the sense of safety originally provided by the mother The personality is organized around the need to maintain self esteem thereby preserving the individual s sense of safety and warding off deep seated paranoid anxiety which signals the potential of annihilation of the self Paranoid anxiety is the counterpart of intraspecific aggression and the potential of the group as a whole to attack and annihilate the individual Paranoid anxiety which was recognized by Melanie Klein as playing a critical role in infant development is not overcome as development proceeds but remains latent buried under layers of personality organization that are essentially concerned with sourcing recognition and approval from the social environment thereby inhibiting others aggression and guarding against annihilation of the self The book adds to self psychology Kohut by showing how the principle of self preservation underpins all aspects of normal and abnormal character dynamics It integrates self psychology with other branches psychoanalytic theory and revives the link between psychoanalysis and ethology Ethology Lorenz Hass Eibl Eibesfeldt has provided insights into how interrelated intraspecific aggression and appeasement gestures are critically important for the evolution of social behavior in higher animals as well as for cultural evolution in humans insights that allow more generally for a bridging of the gap between psychoanalysis and the biology of social behavior Furthermore an evolutionary approach to character dynamics and related social phenomena will

have important implications for understanding psychopathological vulnerabilities and self-perpetuating processes in mental illness **The Human Animal** Hans Hass, 1970 **Self-Determination Theory** Richard Ryan, Edward L. Deci, 2018-11-06 Among the most influential models in contemporary behavioral science self-determination theory SDT offers a broad framework for understanding the factors that promote human motivation and psychological flourishing In this authoritative work SDT cofounders Richard M Ryan and Edward L Deci systematically review the theory's conceptual underpinnings empirical evidence base and practical applications across the lifespan Ryan and Deci demonstrate that supporting people's basic needs for competence relatedness and autonomy is critically important for virtually all aspects of individual and societal functioning Jacket **Looking for a Few Good Males** Erika L. Milam, 2010-03-15 2010 Outstanding Academic Title Choice Magazine Why do female animals select certain mates and how do scientists determine the answer In considering these questions Erika Lorraine Milam explores the fascinating patterns of experiment and interpretation that emerged as twentieth-century researchers studied sexual selection and female choice Approaching the topic from both biological and animal studies perspectives Milam not only presents a broad history of sexual selection from Darwin to sociobiology but also analyzes the animal-human continuum from the perspectives of sex evolution and behavior She asks how social and cultural assumptions influence human-animal research and wonders about the implications of gender on scientific outcomes Although female choice appears to be a straightforward theoretical concept the study of sexual selection has been anything but simple Scientists in the early twentieth century investigated female choice in animals but did so with human social and sexual behavior as their ultimate objective By the 1940s evolutionary biologists and population geneticists shifted their focus studying instead how evolution affected natural animal populations Two decades later organismal biologists once again redefined the investigation of sexual selection as sociobiology came to dominate the discipline Outlining the ever-changing history of this field of study Milam uncovers lost mid-century research programs and finds that the discipline did not languish in the decades between Darwin's theory of sexual selection and sociobiology as observers commonly believed Rather population geneticists ethologists and organismal biologists alike continued to investigate this important theory throughout the twentieth century An Ethological Study of Children's Behavior William Clement McGrew, 1972 **From a Culture of Violence to a Culture of Peace**, 1996 Through this volume UNESCO aims to further reflection on the major changes facing the international community today how to replace the existing culture of violence with a culture of peace The text presents contributions by eminent peace researchers philosophers jurists and educators on the multiple facets of a culture of peace The contributors underline the universal nature of a culture of peace some delve into its very concept others analyze the manner in which it is achieved while others concentrate on the global endeavour to which UNESCO is dedicated National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971 **The Mystery of Unity** Patricia A. Anna-Teresa Tymieniecka, 2007-08-23 Transcendental phenomenology presumed to have overcome the classic mind body dichotomy in terms of consciousness yet according to progress in scientific studies the biological functions of the brain seem to appropriate significant functions attributed traditionally to consciousness Should we indeed dissolve the specificity of human consciousness by explaining human experience in its multiple sense giving modalities through the physiological functions of the brain The present collection of studies addresses this crucial question challenging such naturalizing reductionism from multiple angles In search for the roots of The Specifically Human Experience Bombala moving along the line of Animality and Intellection Gosetti Ferencei Naturalistic Attitude and Personalistic Attitude Villela Petit and numerous other perspectives we arrive at a novel proposal to explain the scholar functional differentiation of conscious modalities We reach their source in the onto-poietic thread conducting the Logos of Life in its stepwise Evolutive Unfolding Carmen Cozma and in sentience as its quintessential core of further irreducible continuity Tymieniecka dispelling dichotomies and reductionisms

The Explicit Animal R. Tallis, 2016-07-27 Criticizes attempts to biologize consciousness by explaining its origin in evolutionary terms and identifying mental phenomena with brain processes to computerize it by identifying mind with the supposed computational activity of the brain and to eliminate it by denying the reality of qualia

Man and Animal Hermann Poppelbaum, 2014-08-29 To be man is to know the animals and all the creatures of the earth it is to recognize our responsibility towards these beings once of the same order as ourselves but now obliged to live beside us in an incompleteness that never ceases its appeal to human beings warning us to make ourselves worthy of the trust invested in us Hermann Poppelbaum What is the historical and evolutionary relationship between man and animal In this classic text based on the anthroposophical science founded by Rudolf Steiner Poppelbaum trained in Biology compares the outer forms of man and animal revealing their essential differences and contrasting inner experiences Drawing a bold and clear delineation between the fundamental nature of man and that of the animal Poppelbaum argues that human beings are not the accidental outcome of animal development but the hidden source of evolution itself He goes on to discuss the true relationship of both man and animal to their environment and develops a critique of contemporary theories regarding human and animal evolution He argues that rather than a simple reflex of the nervous system the human spirit is a microcosmic reflection of the spiritual macrocosm and our individual consciousness is a crucial seed for future evolution
