The Chemical Dynamics And Kinetics Of Small Radicals:

The Chemical Dynamics and Kinetics of Small Radicals Ketian Liu, Albert Wagner, 1996-01-19 This book highlights recent progress in the chemistry of radicals. Developments include the growing use of lasers to generate radicals, the application of lasers to provide state angular polarization energy and real time resolution in kinetics and dynamics experiments, the development of theories for handling the reactions of radicals and the simulation of the reaction dynamics of increasingly larger systems for direct comparison to experimental results. The book emphasizes the increasing interaction between experimental dynamics, kinetics and theory. It is appropriate for chemistry graduate students and researchers about to enter the field. However, the discussions of some topics progress to a more advanced level so that even an expert will find the book useful.

Laser Spectroscopy and Photochemistry on Metal Surfaces Hai-Lung Dai, 1995 Using lasers to induce and probe surface processes has the advantages of quantum state specificity, species selectivity, surface sensitivity, fast time resolution, high frequency resolution and accessibility to full pressure ranges. These advantages make it highly desirable to use light to induce, control or monitor surface chemical and physical processes. Recent applications of laser based techniques in studying surface processes have stimulated new developments and enabled the understanding of fundamental problems in energy transfer and reactions. This volume will include discussions on spectroscopic techniques, energy transfer, desorption dynamics and photochemistry.
