The Fat Soluble Vitamins Handbook Of Lipid Research Series Volume :

Glycolipids, Phosphoglycolipids, and Sulfoglycolipids Morris Kates, 2013-06-29 The early history and development of the field of glycolipids was concerned mainly with the predominant glycolipids found in higher animal tissues namely the glycosphingolipids as has been extensively documented by J N Kanfer and S Hakomori in Volume 3 of this series The major glycolipids in organisms of the plant kingdom however such as bacteria yeasts and fungi algae and higher plants are glycoglycerolipids although glycosphingolipids are also present as minor components in these organisms except for bacteria It is of interest that one of the pioneers in glycosphingolipid research Herbert E Carter also pioneered the discovery and structural elucidation of the plant galactosyldiacylglycerols This class of glycolipids is present in chloroplast membranes and must surely be one of the most ubiquitous and abundant natural substances in the world thereby deserving the attention of lipid biochemists It is therefore surprising to learn that in contrast to the glycosphingolipids which were discovered in the 1870s glycoglycerolipids were not discovered until the 1950s Since that time investigations of the structure and distribution of these glycolipids have proceeded at an exponentially increasing rate and much information is now available for representatives of many genera of bacteria yeasts algae and higher plants Glycoglycerolipids have also been identified in animal cells particularly in the brain testes and sperm

The Fat-Soluble Vitamins H. DeLuca, 2012-12-06 The first demonstration of the existence of a vitamin and the full recognition of this fact are often attributed to the work of McCollum who found that a substance in butterfat and cod liver oil was necessary for growth and health of animals fed purified diets It became obvious that an organic substance present in microconcentrations was vital to growth and reproduction of animals Following the coining of the word *vitamine* by Funk McCollum named this fat soluble substance vitamin A We can therefore state that vitamin A was certainly one of the first known vitamins yet its function and the function of the other fat soluble vitamins had remained largely unknown until recent years However there has been an explosion of investigation and new information in this field which had remained quiescent for at least two or three decades It is now obvious that the fat soluble vitamins function quite differently from their water soluble counterparts We have learned that vitamin D functions by virtue of its being converted in the kidney to a hormone that functions to regulate calcium and phosphorus metabolism This new endocrine system is in the process of being elucidated in detail and in addition the medical use of these hormonal forms of vitamin D in the treatment of a variety of metabolic bone diseases has excited the medical community

Lipid Second Messengers Robert M. Bell, John H. Exton, Stephen M. Prescott, 2013-06-29 Lipids traditionally have been viewed as serving two functions to form cellular membranes and to serve as energy stores During the last two decades a new role for lipids has taken center stage lipids can act as signalling molecules This book deals with a variety of lipids that have been shown to be messengers Leading scientists explore all known lipid classes except steroid hormones Researchers and educators in biochemistry as well as in molecular and cellular biology will appreciate this volume

Biotechnology of Vitamins, Pigments and Growth Factors Erick J. Vandamme, 2012-12-06 Vitamins and related growth factors belong to the few chemicals with a positive appeal to most people the name evokes health vitality fitness strength each one of us indeed needs his daily intake of vitamins which should normally be provided via a balanced and varied diet However current food habits or preferences or food processing and preservation methods do not always assure a sufficient natural daily vitamin supply even for a healthy human being this is all the more true for stressed or sick individuals Although modern society is seldom confronted with the notorious avitaminoses of the past they do still occur frequently in overpopulated and poverty and famine struck regions in many parts of the world Apart from their in vivo nutritional physiological roles as growth factors for man animals plants and micro organisms vitamin compounds are now being introduced increasingly as food feed additives as medical therapeutical agents as health aids and also as technical aids Indeed today an impressive number of processed foods feeds cosmetics pharmaceuticals and chemicals contain extra added vitamins or vitamin related compounds and single or multivitamin preparations are commonly taken or prescribed These reflections do indicate that there is an extra need for vitamin supply other than that provided from plant and animal food resources Most added vitamins are indeed now prepared chemically and or biotechnologically via fermentation bioconversion processes Similarly other related growth factors provitamins vitamin like compounds i e
