**Afghanistan: Taking Back The Infantry Half-Kilometer** Major Thomas P. Ehrhart, 2015-11-06 Operations in Afghanistan frequently require United States ground forces to engage and destroy the enemy at ranges beyond 300 meters. These operations occur in rugged terrain and in situations where traditional supporting fires are limited due to range or risk of collateral damage. With these limitations, the infantry in Afghanistan requires a precise lethal fire capability that exists only in a properly trained and equipped infantryman. While the infantryman is ideally suited for combat in Afghanistan, his current weapons doctrine and marksmanship training do not provide a precise lethal fire capability to 500 meters and are therefore inappropriate. Comments from returning non-commissioned officers and officers reveal that about fifty percent of engagements occur past 300 meters. The enemy tactics are to engage United States forces from high ground with medium and heavy weapons, often including mortars, knowing that we are restricted by our equipment limitations and the inability of our overburdened soldiers to maneuver at elevations exceeding 6000 feet. Current equipment training and doctrine are optimized for engagements under 300 meters and on level terrain. There are several ways to extend the lethality of the infantry. A more effective 5.56 mm bullet can be designed which provides enhanced terminal performance out to 500 meters. A better option to increase incapacitation is to adopt a larger caliber cartridge which will function using components of the M16/M4. The 2006 study by the Joint Service Wound Ballistics Integrated Product Team discovered that the ideal caliber seems to be between 6.5 and 7 mm. This was also the general conclusion of all military ballistics studies since the end of World War I.

**The Battle Rifle** Russell C. Tilstra, 2014-04-04 While the 20th century brought many technological advancements to the battlefield, a key weapon of warfare remains the soldier and his rifle. This volume chronicles the historical development of the modern service rifle after World War II and examines its resurgence in Afghanistan after generations of absence following the introduction of the assault rifle. Individual chapters survey the most combat tested models, including the FN FAL, U.S. M14, and HK 417, in technical detail, emphasizing key points in the evolution of rifle technology and ammunition. Also explored is the development of the current M16 series rifle and how recent difficulties in Afghanistan have led to an increasing reliance on the venerable M14. Providing a strong knowledge base of the various weapons now in service throughout the world, this instructive work demonstrates that the battle rifle has not outlived its usefulness.

**A History of Innovation: U.S. Army Adaptation in War and Peace** Jon T. Hoffman, 2010-01-15 The U.S. Army has a long record of fielding innovations that not only have enhanced its effectiveness on the battlefield but also sometimes had an impact far beyond warfare. General Editor Jon T. Hoffman has brought together eleven authors who cover the gamut from the invention of the M1 Garand rifle between the world wars through the development of the National Training Center in the 1980s. While many books lay out theories about the process of innovation or detail the history of a large scale modernization, the collection of fourteen essays in *A History of Innovation: U.S. Army Adaptation in War and Peace* fills a different niche in the literature. This work is neither a historical account of how the Army has adapted over time nor a theoretical look at

models that purport to show how innovation is best achieved Instead it captures a representative slice of stories of soldiers and Army civilians who have demonstrated repeatedly that determination and a good idea often carry the day in peace and war Despite the perception of bureaucratic inertia the institution s long history of benefiting from the inventiveness of its people indicates that it is an incubator of innovation after all
