Dancing Carl Gary Paulsen, 2012-05-22 Dancing Carl Gary Paulsen's first novel was a ALA Best Book for Young Adults and a Notable Children's Trade Book for the Language Arts In the winter life in McKinley Minnesota revolves around the rinks where kids play hockey and grown ups skate to scratchy phonograph records Then the year Marsh and his best friend Willy are twelve Carl appears at the rink wearing a battered old leather flight jacket and doing a strange dance that is both beautiful and disturbing to watch It is Marsh and Willy who discover the terrible secret behind Carl's dance a secret that threatens to destroy him But a small miracle occurs and Carl's dance becomes a fragile and tentative expression of hope and the healing power of love **DEPTH PERCEPTION WITH RELATION TO PERSONALITY & INTELLIGENCE OF PLAYERS**

Dr. Durgeshnandini R. Titarmare, 2020-10-14 Depth perception refers to the ability to distinguish the distance of objects or to make judgments about relative distance This capacity also called distance perception adds the third dimension to height and width Binocular vision simultaneous vision with both eyes is the primary basis for depth perception The two eyes focus on an object from depth in one's perception Monocular vision seeing with one eye tends to flatten things in the distance In motor activities there are many opportunities for making judgments about the distance of people or objects For example the passer in football needs to determine with considerable accuracy the distance of his receivers and his opponents Similarly the receiver must be able at all times to make an accurate judgment about the distance of the thrown ball The golfer on the fairway must make an accurate estimate of the distance of the pin so that he can determine which club to select

and how hard to swing The high jumper pole vaulter or broad jumper in track needs to make an accurate estimation of the distance to the take off point Or he will be required to make a last second adjustment in stride A misjudged fly ball in baseball results from a poor estimation of the distance and speed of the ball The batter with poor depth perception is most susceptible to a change up pitch In most motor activities and especially in ball games the ability to distinguish distances is strategic to efficient performance
