The Human Blood Basophil Morphology Origin Kinetics Function And Pathology:

The Human Blood Basophil M.R. Parwaresch,2012-12-06 The blood basophils lead a shadowy existence in the field of hematology even now 100 years after their discovery by PAUL EHRLICH In clinical medicine they were hardly noticed for many decades since they occur in such small numbers in the blood that small and moderate variations in the basophil count were not detectable with common counting methods This situation has changed since the introduction of direct counting methods It was noticed for example that the blood basophil count is increased in hyperlipemia In the field of pathology the blood basophil was practically overlooked until recently This was due to the fact that with common fixations in aqueous solutions the granules dissolve so that the cells can no longer be stained specifically and therefore escape observation This problem was solved through special fixing solutions However interest in the blood basophils remained confined to only a few research groups

Mast Cells, Mediators and Disease Stephen T. Holgate,2012-12-06 In 1879 Paul Ehrlich first described the mast cell as a tissue fixed cell containing many granules which when stained with basic dyes such as toluidine blue changed the colour spectrum of the dye in a process called metachromasia Since this early description pathologists physicians and pharmacologists have been fascinated by this cell on account of its central involvement in human allergic diseases Approximately four decades after Ehrlich's first description of the mast cell Prausnitz and Kiistner reported their pioneer experiment demonstrating that the immediate skin wheal response to allergen could be passively transferred with serum They named the antigen specific serum factor reagin A further four and one half decades had to pass before the connection between the mast cell and reagin could be made with the identification of reagin as an immunoglobulin E by Johansson and Ishizaka and its unique property to bind with high affinity to specific receptors on mast cells and basophils Meanwhile in the 1920s Coca published a series of papers in which he described the clinical features of acute allergic responses and first used the term atopy This together with the fundamental pharmacological studies of Sir Henry Dale in identifying histamine as one mediator of the acute anaphylactic reaction provided the second approach which eventually linked the mast cell to allergic tissue reactions Indeed it was Best working in Dale's group who first showed that histamine was a chemical stored in mast cells

Blood Cells Barbara J. Bain, Mike Leach,2025-07-18 A comprehensive guide to blood cell morphology and interpretation fully updated throughout Understanding blood cell morphology and interpreting blood counts accurately is essential for both haematologists and biomedical scientists This meticulously updated and comprehensive seventh edition of *Blood Cells A Practical Guide* combines expert guidance with high quality imaging This edition introduces new clinical images to enhance the contextual understanding of haematological findings alongside the latest WHO and International Consensus classifications of haematological neoplasms *Blood Cells A Practical Guide* bridges the gap between laboratory science and clinical application covering essential techniques such as specimen collection blood film preparation and staining The authors also discuss the principles of manual and automated blood counts as well as

abnormalities in blood counts and films within a clinical context With up to date advice on additional tests to aid diagnosis this new edition reinforces the importance of microscopy whilst addressing the evolving demands of laboratory and clinical haematology Designed as both a reference for practising haematologists and a bench manual for trainees Blood Cells A Practical Guide Features new high quality clinical and morphological images to enhance blood cell identification and interpretation Highlights potential pitfalls and spurious results in haematological analysis to improve diagnostic accuracy Offers a self assessment component with multiple choice questions MCQs and extended matching questions EMQs available online Is written by leading experts with decades of experience in diagnostic haematology and blood cell morphology Blood Cells A Practical Guide remains an indispensable resource for those dedicated to the study and practice of haematology such as haematologists clinical scientists and biomedical scientists at all levels It also serves as a valuable reference for diagnostic haematology courses and laboratory training programmes in medical and biomedical science degrees

Local Immune Responses Of The Gut Timothy J. Newby, Christopher R. Stokes, 2019-06-04 First published in 1984 The main interest of this book is immunological The first chapter deals with the nature of the local immune system and discusses it within the context of the normal physiology of the gut Mast Cell Activation and Mediator Release K. Ishizaka, 1984

Red Cell Rheology M. Bessis, S.B. Shohet, N. Mohandas, 2012-12-06 Hemolysis during filtration through micropores studied by Chien et al I showed a dependence on pressure gradient and pore diameter that at the time of publication did not permit an easy interpretation of the hemolytic mechanism Acting on the assumption that thresholds of hemolysis are easier to correlate with physical forces than extents of hemolysis we performed a series of experiments repeating some of the conditions reported in I and then focusing on low L1P in order to define better the thresholds of hemolysis for several pore sizes Employing a model of a deformed red cell shape at the pore entrance based on micropipette observations we related the force field in the fluid to a biaxial tension in the membrane The threshold for lysis correlated with a membrane tension of 30 dynes cm This quantity is in agreement with lysis data from a number of other investigators employing a variety of mechanisms for introducing membrane tension The sequence of events represented here is a Fluid forces and pressure gradients deform the cell into a new elongated shape b Extent of deformation becomes limited by the resistance of the cell membrane to undergo an increase in area c Fluid forces and pressure gradients acting on the deformed cell membrane cause an increase in biaxial tension in the membrane d When the strain caused by this tension causes pores to open in the membrane the threshold for hemolysis has been reached 2

Mohammad R. Parwaresch, 1976 Inflammation and Angiogenesis Domenico Ribatti, 2017-11-08 This book is focused on

the analysis of the role played by immune cell components in the angiogenic process associated with inflammation and tumor growth Both innate and adaptive immune cells are involved in the mechanisms of endothelial cell proliferation migration and activation through the production and release of a large spectrum of pro angiogenic mediators These may create the specific microenvironment that favors an increased rate of tissue vascularization The link between chronic inflammation and tumorigenesis was first proposed by Rudolf Virchow in 1863 after the observation that infiltrating leukocytes are a hallmark of tumors and first established a causative connection between the lymph reticular infiltrate at sites of chronic inflammation and the development of cancer Tumors were described as wounds that never heal and surgeons have long described the tendency of tumors to recur in healing resection margin and it has been reported that wound healing environment provides an opportunistic matrix for tumor growth As angiogenesis is the result of a net balance between the activities exerted by positive and negative regulators this book will also provide information on some anti angiogenic properties of immune cells that may be utilized for a potential pharmacological use as anti angiogenic agents in inflammation as well as in cancer The work is written for researchers in the field and also for graduate students which approach this matter
