**Origins of Human Innovation and Creativity** Scott A. Elias, 2012-12-31 Innovation and creativity are two of the key characteristics that distinguish cultural transmission from biological transmission This book explores a number of questions concerning the nature and timing of the origins of human creativity What were the driving factors in the development of new technologies What caused the stasis in stone tool technological innovation in the Early Pleistocene Were there specific regions and episodes of enhanced technological development or did it occur at a steady pace where ancestral humans lived The authors are archaeologists who address these questions armed with data from ancient artefacts such as shell beads used as jewelry primitive musical instruments and sophisticated techniques required to fashion certain kinds of stone into tools Providing state of art discussions that step back from the usual archaeological publications that focus mainly on individual site discoveries this book presents the full picture on how and why creativity in Middle to Late Pleistocene archeology anthropology evolved Gives a full original and multidisciplinary perspective on how and why creativity evolved in the Middle to Late Pleistocene Enhances our understanding of the big leaps forward in creativity at certain times Assesses the intellectual creativity of *Homo erectus* *H neanderthalensis* and *H sapiens* via their artefacts      *Origins of Anatomically Modern Humans* Doris V. Nitecki, Matthew H. Nitecki, 2013-11-11 This volume is based on the Field Museum of Natural History Spring Systematics Symposium held in Chicago on May 11 1991 The financial support of Ray and Jean Auel and of the Field Museum is gratefully acknowledged When we teach or write we present only those elements that support our arguments We avoid all weak points of our debate and all the uncertainties of our models Thus we offer hypotheses as facts Multiauthored books like ours which simultaneously advocate and question diverse views avoid the pitfalls and lessen the impact of indoctrination In this volume we analyze the anthropological and biological disagreements and the positions taken on the origins of modern humans point out difficulties with the interpretations and suggest that the concept of the human origin can be explained only when we first attempt to define *Homo sapiens sapiens* One of the major controversies in physical anthropology concerns the geographic origin of anatomically modern humans It is undisputed due to the extensive research of the Leakeys and their colleagues that the family Hominidae originated in Africa but the geographic origin of *Homo sapiens sapiens* is less concretely accepted Two schools of thought exist on this topic      [50 Great Myths of Human Evolution](#) John H. Relethford, 2017-01-17 50 Great Myths of Human Evolution uses common misconceptions to explore basic theory and research in human evolution and strengthen critical thinking skills for lay readers and students Examines intriguing yet widely misunderstood topics from general ideas about evolution and human origins to the evolution of modern humans and recent trends in the field Describes what fossils

**Human Adaptation in the Asian Palaeolithic** Ryan J. Rabett, 2012-08-27 This book examines the first human colonization of Asia and particularly the tropical environments of Southeast Asia during the Upper Pleistocene In studying the unique character of the Asian archaeological record it reassesses long accepted propositions about the development of human modernity Ryan J Rabett reveals an evolutionary relationship between colonization the challenges encountered during this process especially in relation to climatic and environmental change and the forms of behaviour that emerged This book argues that human modernity is not something achieved in the remote past in one part of the world but rather is a diverse flexible responsive and ongoing process of adaptation

**Culture Evolves** Andrew Whiten, 2012 Culture broadly defined as all we learn from others that endures for long enough to generate customs and traditions shapes vast swathes of our lives and has allowed the human species to dominate the planet in an evolutionarily unique way Culture and cultural evolution are uniquely significant phenomena in evolutionary biology they are products of biological evolution yet they supplement genetic transmission with social transmission thus achieving a certain independence from natural selection However cultural evolution nevertheless expresses key Darwinian processes itself and also interacts with genetic evolution Just how culture fits into the grander framework of evolution is a big issue though yet one that has received relatively little scientific attention compared to for example genetic evolution Our capacity for culture appears so distinctive among animals that it is often thought to separate we cultural beings from the rest of nature and the Darwinian forces that shape it Culture Evolves presents a different view arising from the recent discoveries of a diverse range of disciplines that focus on evolutionary continuities First recent studies reveal that learning from others and the transmission of traditions are more widespread and significant across the animal kingdom than earlier recognized helping us understand the evolutionary roots of culture Second archaeological discoveries have pushed back the origins of human culture to much more ancient times than traditionally thought These developments together suggest important continuities between animal and human culture A third new array of discoveries concerns the later diversification of human cultures where the operations of Darwinian like cultural evolutionary

processes are increasingly identified Finally surprising discoveries have been made about the imprint of cultural evolution in children s predisposition to acquire culture The result of a major interdisciplinary meeting held by the Royal Society and the British Academy this book presents the work of leading experts from the fields of ethology behavioural ecology primatology comparative psychology archaeology anthropology evolutionary biology and developmental psychology The Rise of Western Power Jonathan Daly,2021-01-14 In this second edition of *The Rise of Western Power* Jonathan Daly retains the broad sweep of his introduction to the history of Western civilization as well as introducing new material into every chapter enhancing the book s global coverage and engaging with the latest historical debates The West s history is one of extraordinary success no other region empire culture or civilization has left so powerful a mark upon the world Daly charts the West s achievements representative government the free enterprise system modern science and the rule of law as well as its misdeeds two World Wars the Holocaust imperialistic domination and the Atlantic slave trade Taking us through a series of revolutions he explores the contributions of other cultures and civilizations to the West s emergence weaving in historical geographical and cultural factors The new edition also contains more material on themes such as the environment and gender and additional coverage of India China and the Islamic world Daly s engaging narrative is accompanied by timelines maps and further reading suggestions along with a companion website featuring study questions over 100 primary sources and 60 historical maps to enable further study *Evolution, Religion, and Cognitive Science* Fraser Watts,Léon P. Turner,2014-03-20 The cognitive science of religion is an inherently heterogeneous subject incorporating theory and data from anthropology psychology sociology evolutionary biology and philosophy of mind amongst other subjects One increasingly influential area of research in this field is concerned specifically with exploring the relationship between the evolution of the human mind the evolution of culture in general and the origins and subsequent development of religion This research has exerted a strong influence on many areas of religious studies over the last twenty years but for some the so called evolutionary cognitive science of religion remains a deeply problematic enterprise This book s primary aim is to engage critically and constructively with this complex and diverse body of research from a wide range of perspectives To these ends the book brings together authors from a variety of relevant disciplines in the thorough exploration of many of the key debates in the field These include for example can certain aspects of religion be considered adaptive or are they evolutionary by products Is the evolutionary cognitive science of religion compatible with theism Is the evolutionary cognitive approach compatible with other more traditional approaches to the study of religion To what extent is religion shaped by cultural evolutionary processes Is the evolutionary account of the mind that underpins the evolutionary cognitive approach the best or only available account Written in accessible language with an introductory chapter by Ilkka Pyysiäinen a leading scholar in the field this book is a valuable resource for specialists undergraduate and graduate students and newcomers to the evolutionary cognitive science of religion **Science and Technology in World History** William E. **Human DNA** Bartha Maria Knoppers, Claude M. Laberge, Marie Hirtle, 1997-01-01

Human Evolution Robin Dunbar, 2014-05-01 What makes us human? How did we develop language, thought, and culture? Why did we survive, and other human species fail? The past 12,000 years represent the only time in the sweep of human history when there has been only one human species. How did this extraordinary proliferation of species come about, and then go extinct? And why did we emerge such intellectual giants? The tale of our origins has inevitably been told through the stones and bones of the archaeological record, yet Robin Dunbar shows it was our social and cognitive changes, rather than our physical development, which truly made us distinct from other species.

**Learning Strategies and Cultural Evolution during the Palaeolithic** Alex Mesoudi, Kenichi Aoki, 2015-04-30 This volume is motivated by the desire to explain why Neanderthals were replaced by modern humans in terms of cultural differences between the two sub-species. It provides up-to-date coverage on the theory of cultural evolution as is being used by anthropologists, archaeologists, biologists, and psychologists to decipher hominin cultural change and diversity during the Palaeolithic. The contributing authors are directly involved in this effort, and the material presented includes novel approaches and findings. Chapters explain how learning strategies, in combination with social and demographic factors (e.g., population size and mobility patterns), predict cultural evolution in a world without the printing press, television, or the Internet. Also addressed is the inverse problem of how learning strategies may be inferred from actual trajectories of cultural change, for example as seen in the North American Palaeolithic. Mathematics and statistics, a sometimes necessary part of theory, are explained in elementary terms where they appear, with details relegated to appendices. Full citations of the relevant literature will help the reader to further pursue any topic of interest.

**Information Theory And Evolution (Third Edition)** John Scales Avery, 2021-11-24 This highly interdisciplinary book discusses the phenomenon of life, including its origin and evolution, against the background of thermodynamics, statistical mechanics, and information theory. Among the central themes is the seeming contradiction

between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress
