**The Consciousness' Drive** Charles Cole, 2018-09-18 What is the uniquely human factor in finding and using information to produce new knowledge Is there an underlying aspect of our thinking that cannot be imitated by the AI equipped machines that will increasingly dominate our lives This book answers these questions and tells us about our consciousness its drive or intention in seeking information in the world around us and how we are able to construct new knowledge from this information The book is divided into three parts each with an introduction and a conclusion that relate the theories and models presented to the real world experience of someone using a search engine First Part I defines the exceptionality of human consciousness and its need for new information and how uniquely among all other species we frame our interactions with the world Part II then investigates the problem of finding our real information need during information searches and how our exceptional ability to frame our interactions with the world blocks us from finding the information we really need Lastly Part III details the solution to this framing problem and its operational implications for search engine design for everyone whose objective is the production of new knowledge In this book Charles Cole deliberately writes in a conversational style for a broader readership keeping references to research material to the bare minimum Replicating the structure of a detective novel he builds his arguments towards a climax at the end of the book For our video game video on demand times he has visualized the ideas that form the book s thesis in over 90 original diagrams And above all he

establishes a link between information need and knowledge production in evolutionary psychology and thus bases his arguments in our origins as a species how we humans naturally think and how we naturally search for new information because our consciousness drives us to need it

**Teacher Career Motivation and Professional Development in Special and Inclusive Education in China** Yan Feng, 2010-01-01 Using autobiographical accounts acquired from her extensive career in education the author has explored the multi faceted influences on teacher career motivation and professional development in special and inclusive education in China The social realities faced by teachers in their professional lives in a city in China have been highlighted through comparison and contrast with those of their international peers This is achieved through a comprehensive review of recent literature and an empirical study to encourage teacher voices with this regard The study reveals opportunities and challenges in China in the process of moving towards inclusive education In particular it identifies the impact of teacher recruitment policies teacher education programmes education decentralisation rural urban disparities as well as socio cultural values on teacher career motivation and their professional development It also addresses various implications regarding ethical dilemmas overlooked in previous educational research Meanwhile the author proposes a discussion on Self Determination Theory in terms of motivational change

**The Mental Health of Gifted Intelligent Machines** John Senior, Éva Gyarmathy, 2024-02-13 The Mental Health of Gifted Intelligent Machines explores the increasingly sophisticated behaviours of developing AI and how we can ensure it will have emotional resilience ethical strength and an ability to think in a new and enhanced way Its primary aim is to change how we understand the world by investigating humanity as an intelligent being examining and contrasting human and artificial intelligence The book considers what we can learn from the likely mental health issues that will occur with increasingly sophisticated aspects of machine intelligence and how they will reflect the human condition It asks questions about our identity in a deeply uncertain and disruptive ever changing world how we will improve and enhance our psychological intelligence to meet the increasing complications and demands of the future and what we need to do now to be psychologically intelligent enough to live a full meaningful life in a new world evolving around us The book argues that changes in our understanding of mental health psychology and our view of intelligence will challenge huge aspects of our fundamental beliefs and assumptions and that it is essential we explore new arenas to further understand both our own human psychological issues and mental health as we develop gifted intelligent machines It is a must read for all students researchers and professionals involved with AI gifted education consciousness and mental health
