The Faults Of One:

The Electrician, 1892 *The Pan-American Geologist*, 1923 A monthly journal devoted to speculative geology constructive geological criticism and geological record varies slightly **The Theory of Transformations in Metals and Alloys** John Christian, 2002-12-10 This work is a classic reference text for metallurgists material scientists and crystallographers The first edition was published in 1965 The first part of that edition was revised and re published in 1975 and again in 1981 The present two part set represents the eagerly awaited full revision by the author of his seminal work now published as Parts I and II Professor Christian was one of the founding fathers of materials science and highly respected worldwide The new edition of his book deserves a place on the bookshelf of every materials science and engineering department Suitable thermal and mechanical treatments will produce extensive rearrangements of the atoms in metals and alloys and corresponding marked variations in physical and chemical properties This book describes how such changes in the atomic configuration are effected and discusses the associated kinetic and crystallographic features It deals with areas such as lattice geometry point defects dislocations stacking faults grain and interphase boundaries solid solutions diffusion etc The first part covers the general theory while the second part is concerned with descriptions of specific types of transformations

Geodynamics Adrian E. Scheidegger, 2013-03-09 Geodynamics is an old science Most of the basic theories have been conceived in principle during the 19th century and not many fundamental ideas have been added since Some progress has been made in the following up of these concepts and in some instances in the determination of some important facts about the Earth Nevertheless geodynamics has been a highly speculative subject for about a hundred years and it is not likely that this situation will change during the next hundred It is also unlikely that many basic new ideas will be added in that time interval The reason for this lies in the extreme difficulty of obtaining really relevant data about the mechanics of the Earth partly due to the impossibility of probing into the depths of the Earth by direct means to any considerable extent and partly due to the fact that the time intervals in which something happens are of the order of millions of years which is much too long for any human being to wait and experiment with The situation in geodynamics is therefore much akin to that which existed when the ancient Greek philosophers were speculating about the possibly atomic structure of matter there was at that time absolutely no hope to either confirm or to reject the hypothesis **U.S. Geological Survey Professional Paper**
