The Science of Jurassic World Mark Brake, Jon Chase, 2021-06-15
A tale of some of the most amazing creatures ever to grace this tiny planet unearths how the science fiction of the Jurassic World franchise inspired the evolution of dinosaur science. It all began in 1993. Jurassic Park was a movie landmark in the development of computer-generated imagery and animatronic visual effects. Jurassic Park became the highest grossing movie of that year and the highest grossing film ever at the time, a record held until the 1997 release of Titanic. The field of dinosaur science has blossomed by leaps and bounds and branched out in recent years in no small part to this iconic movie series. In *The Science of Jurassic World* we experience the amazing story of the birth of the dinosaurs, how they evolved to world dominance, how some became gargantuan in size, how others grew wings and flew, and how the rest of them met an untimely end. Chapters include: How did Jurassic Park transform dinosaur science? Was Dr. Alan Grant's job a walk in the park? What's with the giant dinosaur poop? When will we clone dinosaurs? And so much more. Discover how some of cinema's most incredible creations do justice to the jaw-dropping evolution of these fantastic creatures.

Bone Wars Tom Rea, 2021-09-14
Foreword by Matthew C. Lamanna. New Afterword by Tom Rea. Less than one hundred years ago *Diplodocus carnegii*, named after industrialist and philanthropist Andrew Carnegie, was the most famous dinosaur on the planet. The most complete fossil skeleton unearthed to date and one of the largest dinosaurs ever discovered, *Diplodocus* was displayed in a dozen museums around the world and viewed by millions of people. *Bone Wars* explains how a fossil unearthed in the badlands of Wyoming in 1899 helped give birth to the public's fascination with prehistoric beasts. Rea also traces the evolution of scientific thought regarding dinosaurs and reveals the double crosses and behind-the-scenes deals that marked the early years of bone hunting. With the help of letters found in scattered archives, Tom Rea recreates a remarkable story of hubris, hope, and turn of the century science. He focuses on the roles of five men: Wyoming fossil hunter Bill Reed; paleontologists Jacob Wortman, in charge of the expedition that discovered Carnegie's dinosaur, and John Bell Hatcher; William Holland, imperious director of the recently founded Carnegie Museum; and Carnegie himself, smitten with the colossal animals after reading a story in the *New York Journal and Advertiser*. What emerges is the picture of an era reminiscent of today: technology advancing by leaps and bounds, the press happy to sensationalize anything that turned up huge amounts of capital ending up in the hands of a small number of people, and some devoted individuals placing honest research above personal gain.
