Alexander,2015-09-02 Ask anybody what superpower they wished to possess and odds are the answer just might be the ability to fly What is it about soaring through the air held up by the power of one s own body that has captivated humans for so long David Alexander examines the evolution of flight in the only four animals to have evolved this ability insects

pterosaurs birds and bats With an accessible writing style grounded in rigorous research Alexander breaks new ground in a field that has previously been confined to specialists While birds have received the majority of attention from flight researchers Alexander pays equal attention to all four groups of flyers something that no other book on the subject has done before now In a streamlined and captivating way David Alexander demonstrates the links between the tiny 2 mm thrip and the enormous albatross with the 12 feet wingspan used to cross oceans The book delves into the fossil record of flyers enough to satisfy the budding paleontologist while also pleasing ornithologists and entomologists alike with its treatment of animal behavior flapping mechanisms and wing origin theory Alexander uses relatable examples to draw in readers even without a natural interest in birds bees and bats He takes something that is so off limits and unfamiliar to humans the act of flying and puts it in the context of experiences that many readers can relate to Alexander guides readers through the anomalies of the flying world hovering hummingbirds unexpected gliders squirrels for instance and the flyers that went extinct pterosaurs Alexander also delves into wing origin theory and explores whether birds entered the skies from the trees down as gliders or from the ground up as runners and uses the latest fossil evidence to present readers with an answer

Transport of Animals Intended for Breeding, Production and Slaughter R. Moss, 2012-12-06 The transport of farm livestock was the subject of the seminar held from 7-8 July 1981 at the Commission of the European Communities CEC Directorate General for Agriculture Brussels as part of the work of the Division Coordinating Agricultural Research The aims of the seminar were to examine the knowledge available on how the physiology and behaviour of animals may change during transport to consider the significance of these changes in relation to welfare and economics and to assess those actions which as experimental projects or observational studies might be proposed to fill the most important gaps in our knowledge of the welfare of farm animals during transport A number of conclusions can be drawn from the proceedings 1 Much knowledge is available from both scientific observations and practical experience which could be used to improve the transport of livestock Methods of loading the construction of vehicles ships crates and aircraft could benefit from the application of existing knowledge It is less clear whether it is best to concentrate on disseminating existing knowledge by education and advice or to contemplate more regulations 2 Losses by down grading at slaughter can largely be attributed to the ways in which animals are transported and handled Wild Animals Every Child Should Know Julia Ellen Rogers, 1911

Animals of To-day Charles John Cornish, 1899 **Lives of Game Animals: Rodents, etc. 2 pts** Ernest Thompson Seton, 1928 Animal Welfare Information Center Newsletter, 1995
