Primate Behavior and Human Origins Glenn King, 2015-10-30 This comprehensive introduction demonstrates the theoretical perspectives and concepts that are applied to primate behavior and explores the relevance of non human primates to understanding human behavior Using a streamlined and student friendly taxonomic framework King provides a thorough overview of the primate order The chapters cover common features and diversity and touch on ecology sociality life history and cognition Text boxes are included throughout the discussion featuring additional topics and more sophisticated taxonomy The book contains a wealth of illustrations and further resources to support teaching and learning are available via a companion website Written in an engaging and approachable style this is an invaluable resource for students of primate behavior as well as human evolution

The Evolving Human Primate Donald Sharpes, 2016-01-01 The theme of this book is our primate biology or who we are as a continuum of our animal ancestors Professor Sharpes first uses comparative animal studies and recent finds in archaeology to outline this argument and theme and thus provides evidence for human animal origins He then reveals how our emotions and behaviors influence our lives as demonstrated through the major social sciences the philosophy of our cognitive functioning our psychology and our religious beliefs as consumers the economy as national citizens political science government and as world citizens climate change The idea is to examine the human condition from more than one discipline and to synthesize research studies that analyze human behavior that is socially similar to other primate behavior What makes this book unique is its interdisciplinary investigation of human primates from the variety of the social sciences He has conducted similar research in two previous books *The Evolution of the Social Sciences* 2009 and *Outcast and Heretics Profiles in Independent Thought and Courage* 2007 The target audience is the articulate and literate community in the broad field of the social sciences a book appropriate for a general audience and students in all the social science specialties including interdisciplinary studies such as courses in evolution climate change politics anthropology psychology and the life sciences

Spontaneous Pathology of the Laboratory Non human Primate serves as a go to resource for all pathologists working on primates in safety assessment studies In addition it helps diagnostic veterinary pathologists rule out spontaneous non clinical disease pathologies when assigning cause of death to species in zoological collections Primate species included are rhesus cynomolgus macaques and marmosets Multi authored chapters are arranged by organ system thus providing the necessary information for continued research Pathologists often face a lack of suitable reference materials or historical data to determine if pathologic changes they are observing in monkeys are spontaneous or a consequence of other treatments or factors Contains color illustrations that depict the most common lesions to augment descriptions Covers descriptions that are compliant with the International Harmonization of Nomenclature and Diagnostic Criteria INHAND guidelines set forth by the Society of Toxicologic Pathology STP Provides pathologists with common terms that are compliant with the FDA s Standard for Exchange of Nonclinical Data SEND guidelines

Primate Sexuality Alan F. Dixson,1998 *Primate Sexuality* is a uniquely comprehensive synthesis of our knowledge about the sexual behaviour of primates In it Alan Dixson reviews and integrates both the evolutionary biology and the physiological basis of sexual behaviour across the whole spectrum of primates from prosimians to humans Covering almost every aspect of primate sexuality the book begins with an analysis of the history of research into primate sexual behaviour Several chapters discuss the complex array of mating systems exhibited by primates and the bewildering range of tactics which influence sexual interactions within mating systems and ultimately reproductive success Sex selection sperm competition and the evolution of sexual dimorphism are explored The book also reviews our current knowledge of the physiological aspects of sexuality such as the sexual differentiation of the brain hormonal mechanisms the ovarian cycle and the neuroendocrine regulation of sexual behaviour No other book written on the subject of primate sexuality exhibits such comparative breadth or technical depth Dixson has been working on primates for almost 30 years and has put together an outstanding volume drawing on and collating work spread across more than 2000 references The work is illustrated throughout with hundreds of original drawings and figures It will be welcomed by zoologists anthropologists and psychologists researching the sexual behaviour of primates as well as by psychiatrists and clinicians with an interest in

human sexuality *Genome Mapping and Genomics in Human and Non-Human Primates* Ravindranath Duggirala, Laura Almasy, Sarah Williams-Blangero, Solomon F.D. Paul, Chittaranjan Kole, 2015-03-25 This book provides an introduction to the latest gene mapping techniques and their applications in biomedical research and evolutionary biology It especially highlights the advances made in large scale genomic sequencing Results of studies that illustrate how the new approaches have improved our understanding of the genetic basis of complex phenotypes including multifactorial diseases e g cardiovascular disease type 2 diabetes and obesity anatomic characteristics e g the craniofacial complex and neurological and behavioral phenotypes e g human brain structure and nonhuman primate behavior are presented Topics covered include linkage and association methods gene expression copy number variation next generation sequencing comparative genomics population structure and a discussion of the Human Genome Project Further included are discussions of the use of statistical genetic and genetic epidemiologic techniques to decipher the genetic architecture of normal and disease related complex phenotypes using data from both humans and non human primates **Primates in Anthropogenic Landscapes** Tracie McKinney, Siân Waters, Michelle A. Rodrigues, 2023-01-01 The field of primatology has expanded substantially in the last twenty years particularly with regard to studies of primates in human altered landscapes This text aims to review the recent literature on anthropogenic of human origin influences on non human primates bringing an overview of this important area of primatology together for students Chapters are grouped into three sections representing the many ways anthropogenic activities affect primate populations The first section Human Influences on Primate Habitat covers ways in which wild primates are affected by human actions including forest fragmentation climate change and the presence of dogs Section two Primates in Human Dominated Landscapes looks at situations where non human primates and humans share space this includes primates in urban environments primate tourism and primates in agroecosystems The final section Primates in Captivity looks at primate behaviour and welfare in captive situations including zoos the primate pet trade and in entertainment **Gestural Communication in Nonhuman and Human Primates** Katja Liebal, Cornelia Müller, Simone Pika, 2007 The aim of this volume is to bring together the research in gestural communication in both nonhuman and human primates and to explore the potential of a comparative approach and its contribution to the question of an evolutionary scenario in which gestures play a significant role *Invasive Studies of the Human Epileptic Brain* Samden D. Neurobiology of human language and its evolution: Primate and Nonprimate Perspectives Constance Scharff, Angela D. Friederici, Michael Petrides, The evolution of human language has been discussed for centuries from different perspectives Linguistic theory has proposed grammar as a core part of human language that has to be considered in this context Recent advances in neurosciences have allowed us to take a new neurobiological look on the similarities and dissimilarities of cognitive capacities and their neural basis across both closely and distantly related species A couple of decades ago the comparisons were mainly drawn between human and non human primates investigating the cytoarchitecture of particular brain areas and their structural connectivity Moreover comparative studies were conducted with respect to their ability to process grammars of different complexity So far the available data suggest that non human primates are able to learn simple probabilistic grammars but not hierarchically structured complex grammars The human brain which easily learns both grammars differs from the non human brain among others in how two language relevant brain regions Broca's area and superior temporal cortex are connected structurally Whether the more dominant dorsal pathway in humans compared to non human primates is causally related to this behavioral difference is an issue of current debate Ontogenetic findings suggest at least a correlation between the maturation of the dorsal pathway and the behavior to process syntactically complex structures although a causal prove is still not available Thus the neural basis of complex grammar processing in humans remains to be defined More recently it has been reported that songbirds are also able to distinguish between sound sequences reflecting complex grammar Interestingly songbirds learn to sing by imitating adult song in a process not unlike language development in children Moreover the neural circuits supporting this behavior in songbirds bear anatomical and functional similarities to those in humans In adult humans the fiber tract connecting the auditory cortex and motor cortex dorsally is known to be involved in the repetition of spoken language This pathway is present already at birth and is taken to play a major role during language acquisition In songbirds detailed information exist

concerning the interaction of auditory motor and cortical basal ganglia processing during song learning and present a rich substrate for comparative studies The scope of the Research Topic is to bring together contributions of researchers from different fields who investigate grammar processing in humans non human primates and songbirds with the aim to find answers to the question of what constitutes the neurobiological basis of grammar learning Open questions are Which brain networks are relevant for grammar learning Is there more than one dorsal pathway one from temporal cortex to motor cortex and one to Broca s area and if so what are their functions Has the ability to process sequences of a given hierarchical complexity evolved in different phylogenetic lines birds primates other vocal production learners such as bats Is the presence of a sensory to motor circuit in humans a precondition for development of a dorsal pathway between the temporal cortex and Broca s area What role do subcortical structures Basal Ganglia play in vocal and grammar learning Primate Communication and Human Language Anne Vilain,Jean-Luc Schwartz,Christian Abry,Jacques Vauclair,2011 After a long period where it has been conceived as iconoclastic and almost forbidden the question of language origins is now at the centre of a rich debate confronting acute proposals and original theories Most importantly the debate is nourished by a large set of experimental data from disciplines surrounding language The editors of the present book have gathered researchers from various fields with the common objective of taking as seriously as possible the search for continuities from non human primate vocal and gestural communication systems to human speech and language in a multidisciplinary perspective combining ethology neuroscience developmental psychology and linguistics as well as computer science and robotics New data and theoretical elaborations on the emergence of referential communication and language are debated here by some of the most creative scientists in the world *Pathology of Simian Primates, Part 1* R. N. Fiennes,1972-03-15
