Sinus Node Structure Function And Clinical Relevance:

The Sinus Node F.I. Bonke, 2012-12-06 For the clinician the sinus node is more or less a hidden structure and only by indirect assessment he is able to say something about the function of this center of pacemaker activity The morphologist however is able to describe the structural microscopic and even electronmicroscopic features of this structure The only disadvantage is that as soon as he is coming into the picture the tissue is dead The physiologist tries to investigate the electrophysiological behavior of the sinus node Since there is not a human being willing to give his sinus node for research he has to do his investigation on isolated preparations of animals Though there are a lot of experts in the field of the sinus node they nearly never speak the same language Therefore it was my dream to bring all those people or at least some of them together on a workshop I had the feeling that it was important to organize such a meeting without an audience but only with experts

Bouman, H. Jongsma, 2012-12-06 In the denervated state the mammalian heart both in vivo and in vitro is excited at very regular intervals the coefficient of variance of the interbeat intervals not exceeding 2% The pacemaker that is the source of this regular excitation is localised normally within the sinus node sino atrial node node of Keith and Flack a

most intriguing small piece of tissue in the caval corner of the right atrium A small portion of this node containing a group of probably only a few thousands of cells fires spontaneously that means without any external influence to trigger their activity The so called pacemaker cells do this by letting their membrane potential fall to the level where an action potential will start which subsequently activates surrounding cells to fire an action potential The first question which is tackled in this book is which processes underly this spontaneous diastolic depolarization This is discussed in section I concerning the fundamental properties of pacemaker cells with special reference to ionic membrane currents Although views still quite differ about the exact nature of the membrane processes that cause the automatic pacemaker discharge there is agreement that diastolic depolarization is brought about by the interaction of a number of ionic current systems including both inward and outward going currents

The Slow Inward Current and Cardiac Arrhythmias Douglas P. Zipes, J.C. Bailey, V. Elharrar, 2012-12-06

Since Paul Cranefield published his monograph The Conduction of the Cardiac Impulse in 1975 much has been learned about the role of the slow inward current in cardiac electrophysiology Because of this expanse in knowledge both basic and clinical it appeared reasonable to review in a monograph once again what was known When Martinus Nijhoff first approached us to undertake the task of updating this information we were initially reluctant for several reasons First we did not feel that the subject could be adequately and thoroughly reviewed from the cell to the bedside by a single person Second time constraints on all of us precluded even attempting such a task However we were encouraged by several of our friends egged on one might even say since they wished the job done but did not want to do it themselves who promised faithfully to contribute chapters on time if we accepted the task So we did and most of them did also
