Box, 2012-12-06 One of the most obvious changes that has occurred in behavioural biology in recent years is that it has become conspicuously a problem orientated subject Moreover one of the most important consequences of this has been to stimulate interdisciplinary links between evolutionary biology zoology ecology anthropology and psychology The time is now right to ask questions which relate whole animals in the contexts of their ecosystems with their social behaviour and development with their perceptual and cognitive capacities These are new ways of looking at old problems but we are still at the stage of finding out what kinds of questions to ask For several years now I have been involved in teaching behavioural biology to students of psychology as well as zoology and have greatly appreciated the opportunity to relate material across many different subject areas It is the interfacing of problems as in ecology and psychology for example that makes more sense of topics such as intelligence responses to novelty feeding strategies and social learning The aim of the book is to provide readily digestible information in a number of areas of current interest in behavioural biology Above all it is intended to provide a basis for discussion and further inquiry **Socioecology and Psychology of Primates** Russell H.
