Processing* Jacob Benesty,Jingdong Chen,Yiteng Huang,Israel Cohen,2009-04-28 Noise is everywhere and in most
applications that are related to audio and speech such as human machine interfaces hands free communications voice over IP
VoIP hearing aids teleconferencing telepresence telecollaboration systems and so many others the signal of interest usually
speech that is picked up by a microphone is generally contaminated by noise As a result the microphone signal has to be
cleaned up with digital signal processing tools before it is stored analyzed transmitted or played out This cleaning process is
often called noise reduction and this topic has attracted a considerable amount of research and engineering attention for
several decades One of the objectives of this book is to present in a common framework an overview of the state of the art of
noise reduction algorithms in the single channel one microphone case The focus is on the most useful approaches i e filtering
techniques in different domains and spectral enhancement methods The other objective of Noise Reduction in Speech
Processing is to derive all these well known techniques in a rigorous way and prove many fundamental and intuitive results
often taken for granted This book is especially written for graduate students and research engineers who work on noise
reduction for speech and audio applications and want to understand the subtle mechanisms behind each approach Many new
and interesting concepts are presented in this text that we hope the readers will find useful and inspiring Proceedings of
