several different but related areas The unifying theme was the application of group theory and geometrical methods to the solution of differential and difference equations The emphasis was on the combination of analytical and numerical methods and also the use of symbolic computation This meeting was organized under the auspices of the Centre de Recherches Mathematiques Universite de Montreal Canada This volume has the character of a monograph and should represent a useful reference book for scientists working in this highly topical field   **Geometric and Cohomological Methods in Group Theory** Martin R. Bridson,2009-10-29 An extended tour through a selection of the most important trends in modern geometric group theory   **Topics in Probability and Lie Groups: Boundary Theory** John Christopher Taylor,2001 This volume is comprised of two parts the first contains articles by S N Evans F Ledrappier and Figa Talomanaca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitiled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the freegroup on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators   Office Hours with a Geometric Group Theorist Matt Clay,Dan Margalit,2017-07-11 Geometric group theory is the study of the interplay between groups and the spaces they act on and has its roots in the works of Henri Poincar Felix Klein J H C Whitehead and Max Dehn Office Hours with a Geometric Group Theorist brings together leading experts who provide one on one instruction on key topics in this exciting and relatively new field of mathematics It s like having office hours with your most trusted math professors An essential primer for undergraduates making the leap to graduate work the book begins with free groups actions of free groups on trees algorithmic questions about free groups the ping pong lemma and automorphisms of free groups It goes on to cover several large scale geometric invariants of groups including quasi isometry groups Dehn functions Gromov hyperbolicity and asymptotic dimension It also delves into important examples of groups such as Coxeter groups Thompson s groups right angled Artin groups lamplighter groups mapping class groups and braid groups The tone is conversational throughout and the instruction is driven by examples Accessible to students who have taken a first course in abstract algebra Office Hours with a Geometric Group Theorist also features numerous exercises and in depth projects designed to engage readers and provide jumping off points for research projects   **The Arithmetic and Geometry of Algebraic Cycles** B. Brent Gordon,2000 The NATO ASI CRM Summer School at Banff offered a unique full and in depth

account of the topic ranging from introductory courses by leading experts to discussions of the latest developments by all participants The papers have been organized into three categories cohomological methods Chow groups and motives and arithmetic methods As a subfield of algebraic geometry the theory of algebraic cycles has gone through various interactions with algebraic K theory Hodge theory arithmetic algebraic geometry number theory and topology These interactions have led to developments such as a description of Chow groups in terms of algebraic K theory the application of the Merkurjev Suslin theorem to the arithmetic Abel Jacobi mapping progress on the celebrated conjectures of Hodge and of Tate which compute cycles classgroups respectively in terms of Hodge theory or as the invariants of a Galois group action on tale cohomology the conjectures of Bloch and Beilinson which explain the zero or pole of the L function of a variety and interpret the leading non zero coefficient of its Taylor expansion at a criticalpoint in terms of arithmetic and geometric invariant of the variety and its cycle class groups The immense recent progress in the theory of algebraic cycles is based on its many interactions with several other areas of mathematics This conference was the first to focus on both arithmetic and geometric aspects of algebraic cycles It brought together leading experts to speak from their various points of view A unique opportunity was created to explore and view the depth and the breadth of the subject This volume presents the intriguing results **The Geometry of the Word Problem for Finitely Generated Groups** Noel Brady,Tim Riley,Hamish Short,2007-05-11 The origins of the word problem are in group theory decidability and complexity But through the vision of M Gromov and the language of filling functions the topic now impacts the world of large scale geometry This book contains accounts of many recent developments in Geometric Group Theory and shows the interaction between the word problem and geometry continues to be a central theme It contains many figures numerous exercises and open questions **Groups St Andrews 2009 in Bath: Volume 2** C.
