**Highway to Hell** Joëlle Gergis, 2024-06-03 What will the climate crisis mean for Australia What is the price of our inertia Australia is in peril Do we truly grasp the impact of a warming planet in particular what it will mean for our sunburnt country As temperatures rise the climates of our capital cities will change The sea will rise and we will see increased fire and drought In this powerful essay Joëlle Gergis a leading climate scientist depicts the likely future in vivid and credible detail Working from the science she discusses the world's and Australia's efforts to combat climate change She outlines how far Australia is from keeping its promises to cut emissions She takes aim at false solutions and the folly of adaptation rather than curbing fossil fuel use This is an essay about government paralysis and what is at stake for all of us It's about getting real in the face of an unprecedented threat How many disasters does it take to wake people up to the fact that Australia's climate is becoming more extreme with today's destruction set to be dwarfed by things to come Do people realise that adapting to climate change won't be possible in some parts of the country Joëlle Gergis Highway to Hell This essay contains correspondence relating to Quarterly Essay 93 Bad Cop from Niki Savva Thomas Mayo Lachlan Harris Mark Kenny Robert Wood Paul Strangio and Lech Blaine

**Drought and the Human Story** R.L. Heathcote, 2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained
