conceptualisation of universal information processing systems based on studies of environmental interaction in both biological and non biological systems This conceptualisation is used to demonstrate how a single overarching framework can be applied to the investigation of human learning and memory by considering matter and energy pathways and their connections In taking a stance based on everyday interactions as well as on scientific practices the conceptualisation is used to consider educational theories and practices exemplified by the widely cited cognitive load theory In linking these theories and practices more closely to scientific thinking the book embraces an holistic approach to informational interactions not limited to conceptualisations of pattern signal or meaning The book offers educational researchers and educators an opportunity to re think their approach to instruction to take all facets of student learning environments into account in increasing human knowledge skills and experiences across society
