The Brain In Unclassified Mental Retardation:

Mental Retardation E. Zigler, D. Balla, 2013-05-13 Published in 1983 Mental Retardation is a valuable contribution to the field of Education *Language and Communication in Mental Retardation* Sheldon Rosenberg, Leonard Abbeduto, 2013-05-13 Research on language and communication development and intervention in persons with mental retardation has been conducted at a fast and furious pace during the last two decades Past attempts to summarize this research have been rather restricted focusing on a single narrowly defined substantive domain such as lexical development or of a single etiology such as Down Syndrome This volume in contrast presents a critical integrative review of research and theory on language development and processing across all domains and a variety of etiologies In addition many previous attempts to review portions of this research have failed to consider the research within the context of current theory and data from developmental psycholinguistics and linguistics A major contribution of this book is the emphasis on relevant work outside of mental retardation for understanding and treating the language and communication problems of persons with mental retardation Finally this book is comprehensive and up to date across all the areas of language covered including appropriate introductory material in linguistics and psychology discussions of the innateness cognition first and motherese views of normal language acquisition In addition the authors extensive bibliography is valuable in and of itself to any serious student or professional in the area Indexes to the Epilepsy Accessions of the Epilepsy Information System J. Kiffin Penry, 1978 The Brain in Unclassified Mental Retardation John Barr Cavanagh, 1972 Relates the adventures of a terrible little girl who grew up to be happily mean **Learning and Cognition in the Mentally Retarded** Penelope H. Brooks, Richard Sperber, Charley McCauley, 1984 First published in 1984 Routledge is an imprint of Taylor Francis an informa company **Brain Mechanisms in Problem Solving and Intelligence** Robert Thompson, Francis M. Crinella, Jen Yu, 1990-01-31 This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain One objective of this volume was to make these maps available in a single source Another was to provide a description of learning syndromes arising from local

lesions to different parts of the brain

Handbook of Assessment in Childhood Psychopathology Cynthia L.

Frame, Johnny L. Matson, 2013-11-21 One of the most important practical problems in child psychology and psychiatry is the differential diagnosis of emotional disorders. Until recently the general mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults. In addition there had been few assessment tools available for use with children aside from modified versions of adult instruments. Understandably this approach was controversial and dissatisfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently. The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions. Furthermore a great deal of research on methodology in child assessment procedures has emerged recently. Yet in spite of these advances practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assignment of a psychiatric diagnosis. The focus of this book is to outline the various methods of viewing and categorizing the wide range of childhood psychopathology with special emphasis on the end product of making a differential diagnosis. Our goal was to make this book unique in several ways. First we attempted to cover a wider range of disorders than is typical in currently available handbooks.

Suicide and Self-Damaging Behavior Denys deCatanzaro, 2013-10-22 **Suicide and Self-Damaging Behavior: A Sociobiological Perspective** reviews the status of suicide and other exceptions to the prevailing regularities of behavior. This book discusses the apparent anomaly of self-destructive behavior, current incidence of suicide and self-injury, self-destructiveness in other species and biological fitness and social ecology of suicide. The pro-suicidal gene expression and natural selection death concept, breakdown of other life-preserving factors with coping failure and selection processes and altruism are also elaborated. This text likewise covers the chronic self-abuse, risk-taking and self-injurious or self-mutilative behavior. This publication is a good source for anthropologists, psychologists, sociologists and social scientists concerned with self-destructive behavior.

Library of Medicine (U.S.), 1971 **Child Neuropsychology** John E. Obrzut, George W. Hynd, 2013-09-24 **Child Neuropsychology Volume 2: Clinical Practice** attempts to bridge the gap between neurodevelopmental theory and clinical practice with a pediatric population. The focus is on some of the more common neuropsychological disorders encountered in children along with neuropsychological evaluation, intervention and treatment. Comprised of 11 chapters, this volume begins with an overview of issues and perspectives in clinical child neuropsychology, followed by a discussion on neurodevelopmental learning disorders in children. The neuropsychological basis of psychiatric disorders in children are then examined together with epilepsy and closed head injury as well as different approaches and issues relevant to neuropsychological evaluation of children. Subsequent chapters deal with the importance of soft signs and

neuropsychological screening neuropsychological assessment of children actuarial and clinical assessment practices and intervention and treatment The book also presents an overview of how one might conceptualize and integrate differential diagnosis of neurodevelopmental learning disabilities with appropriate curriculum based intervention strategies The final chapter considers the broader applications of behavioral neuropsychology This book is relevant to clinical child or pediatric neuropsychologists child or school psychologists physicians interested in pediatric neuropsychological disorders and other professionals who provide services to children with neurologically based disorders It may also serve as a reference for audiologists speech and language therapists or educators Mental Retardation and Developmental Disabilities Abstracts
