interventions Then they expand upon these concepts to provide practitioners with convenient realistic suggestions to encourage patient self management in all aspects of COPD care and overall health Ahsan Zafar reviews the natural history recently described COPD phenotypes and gender differences that clearly illustrate the broad spectrum of disease that comprises the term COPD The cover illustration highlights Dr Zafar s creative and artistic talents The extensive nonpulmonary aspects of COPD are reviewed by Ralph Panos in an examination of COPD s multi organ manifestations Next the effect of COPD on sleep and the overlap syndrome the concurrence of COPD and obstructive sleep apnea and its consequences are presented Jean Elwing examines the effect of COPD on the pulmonary vasculature with a detailed discussion of the evaluation and management of pulmonary hypertension associated with COPD COPD s effects on psychosocial functioning and familial interactions are presented by Mary Panos and Ralph Panos The focus of the Primer then shifts from manifestations to treatment with a discussion of stable COPD management With the current plethora of devices for delivering respiratory medications it is difficult for both patients and providers to sustain knowledge of their proper use Aaron Mulhall presents a practical guide to correct inhaler use that reviews all the current devices Folarin Sogbetun then reviews the management of outpatient COPD exacerbations and Nishant Gupta discusses the approach to the patient hospitalized with COPD Because patients with COPD often see multiple subspecialty physicians in addition to their primary care providers interdisciplinary communication and coordination of care is essential for their management Sara Krzywkowski Mohn reviews the interactions between primary and specialty care for the patient with COPD with suggestions for improved communication and care coordination Finally advance care planning including palliative care and hospice is reviewed with a discussion of how end stage COPD affects not only the patient but also their family and social network This COPD Primer incorporates the knowledge that we have learned over the past several years during the development and implementation of a patient centered model for the management of COPD It was written with the explicit goal of assisting both the practicing provider and medical trainee in the care of patients with COPD

**Surface Architecture of Fungal Pathogens** Marcio Rodrigues,2012-05-01 Surface components in fungal cells include cell wall molecules and in certain cases capsular structures In pathogens these components are responsible for key events during interaction with the host These events include recognition of pathogens by the immune system and generation of damage to host cells and tissues The molecular nature of surface structures in fungi is vast and may include glyco proteins polysaccharides lipids and pigments Many of them have been strictly associated with the antifungal immune response as well as with steps of fungal adhesion and dissemination during interaction with host cells For many fungal pathogens surface composition and architecture are determinant for either disease progression or control The diversity of the composition of the cell surface and its molecular architecture are believed to include targets for the action of new antifungals as well as immunogens with potential to interfere with fungal diseases in favor of the host
