Snorkel Immersions In Time:

Snorkel Louis A Galiano, 2006 within our present all times exist including every decision we will make or have made our past our deaths There is no time only the illusion of time and what remains has already been and what has been will be Sixty five year old management consultant Len Giardia is disenchanted Once considered a prodigy in his childhood he now reflects that his life has not turned out quite as he expected His marriage has failed he has become disgusted with his job and he is constantly annoyed by his neighbors and business associates His only solace comes from the occasional snorkeling trip to the Caribbean Islands But Len has developed a peculiar concept that may offer a solution he concludes that time operates in a circle and that as a result of its circuitousness it may contain specific connections by which events can be controlled and changed In the meantime he falls in love with a young Mexican girl And by his own theories he may have become a murderer but only time can provide the answer Poetically written Snorkel Immersions in Time is the story of one man's redemption as he seeks purpose in his life among the natives of a coastal Yucatan village

Refining and Casting of Steel Karel Gryc, Jan Falkus, 2020-11-09 Steel has become the most requested material all over the world during the rapid technological evolution of recent centuries As our civilization

grows and its technological development becomes connected with more demanding processes it is more and more challenging to fit the required physical and mechanical properties for steel in its huge portfolio of grades for each steel producer. It is necessary to improve the refining and casting processes continuously to meet customer requirements and to lower the production costs to remain competitive. New challenges related to both the precise design of steel properties and reduction in production costs are combined with paying special attention to environmental protection. These contradictory demands are the theme of this book.

Fundamentals of Dimensional Analysis Alberto N. Conejo, 2021-05-31 This is the first book which systematically describes an integral approach on dimensional analysis. The amount of textbooks on dimensional analysis is huge; however, most of the books start with the definition of the relevant variables. When the variables are given to the reader without prior knowledge on each problem, it has serious consequences: the usefulness of dimensional analysis is not appreciated, it is not possible to understand the real challenges of this subject, and the result, which is a general relationship with dimensionless groups, is useless. This book closes the hole in previous books because, in addition to describe step by step how to reach the general relationship with dimensionless groups, which creates a solid basis of different metallurgical problems to understand the role of the relevant variables, it provides a full description on how to obtain the experimental data and applies the experimental data to transform the general relationship in a particular solution. Once the reader learns how to design the experimental work and uses that information to define the particular solution, it is possible to assess if the selection of variables was adequate or not. The book is useful for both undergraduate and graduate students.

Immersion Abbie Gascho Landis, 2017-04-13 Abbie Gascho Landis brings readers to a hotbed of mussel diversity in the American Southeast to seek mussels where they eat, procreate, and too often perish. Accompanied often by her husband, a mussel scientist, and her young children, she learned to see mussels on the creekbed to tell a spectacle case from a pigtoe and to worry what vanishing mussels, 70 percent of North American species, are imperiled will mean for humans and wildlife alike. Landis shares this journey traveling from perilous river surveys to dry streambeds and into laboratories where endangered mussels are raised, one precious life at a time. Mussels have much to teach us about the health of our watersheds if we step into the creek and take a closer look at their lives. In the tradition of writers like Terry Tempest Williams and Sy Montgomery, Landis gracefully chronicles these untold stories with a veterinarian's careful eye and the curiosity of a naturalist.

Rubber Boots Methods for the Anthropocene Astrid Oberborbeck Andersen, Nils Bubandt, Rachel Cypher, 2023-03-07 A methodological follow-up to *Arts of Living on a Damaged Planet*. The environmental and climatic crises of our time are fundamentally multispecies crises. And the Anthropocene, a time of human-made disruptions on a planetary scale, is a disruption of the fabric of life as a whole. The contributors to *Rubber Boots Methods for the Anthropocene* argue that understanding the multispecies nature of these disruptions requires multispecies methods. Answering methodological challenges posed by the Anthropocene, *Rubber Boots Methods for the Anthropocene* retools the empirical study of the

socioecological chaos of the contemporary moment across the arts human science and natural science Based on critical landscape history multispecies curiosity and collaboration across disciplines and knowledge systems the volume presents thirteen transdisciplinary accounts of practical methodological experimentation highlighting diverse settings ranging from the High Arctic to the deserts of southern Africa and from the pampas of Argentina to the coral reefs of the Western Pacific always insisting on the importance of firsthand rubber boots immersion in the field The methodological companion to *Arts of Living on a Damaged Planet Ghosts and Monsters of the Anthropocene* Minnesota 2017 this collection puts forth empirical studies of the multispecies messiness of contemporary life that investigate some of the critical questions of our time
