*Astronomy in the Service of Islam* David A. King,2024-12-11 Based on a wide variety of previously unstudied sources these articles explain how science was applied to three aspects of Islamic ritual in the Middle Ages the regulation of the lunar calendar the organisation of the times of the five daily prayers and the determination of the sacred direction qibla towards the Kaaba in Mecca Simple procedures of folk astronomy were used by the scholars of religious law who determined popular practice more complicated mathematical methods were provided by the scientists and this proved a powerful incentive for the development of scientific analysis and research Some of these procedures were to have far reaching consequences For example the astronomical alignment of the Kaaba known to various medieval writers but long forgotten led to the adoption of similar alignments for the qibla and the final articles show how these were calculated whether from astronomical observation or geographical computation and their impact on the orientation of religious and secular architecture across the Islamic world C est partir d une grande diversit de sources inexplor es que ces articles expliquent comment la science avait t appliqu e a trois aspects du rituel islamique au Moyen Age la r gulation du calendrier lunaire l organisation des heures assign es aux cinq pri res quotidiennes et l tablissement de la direction sacr e qibla vers la Kaaba de la Mecque Des proc d s simples d astronomie populaire taient utilis s par les rudits en droit religieux qui d cidaient de la pratique populaire des m thodes math matiques plus complexes taient offertes par les hommes de science ce qui en

 History** Georgia Bizios, 1998 Mathematical Instrumentation in Fourteenth-Century Egypt and Syria Franois  
 Charette, 2003-06-01 This volume contains the critical edition with English translation of a richly illustrated Arabic treatise on  
 the construction of over one hundred various astronomical instruments many of which are otherwise unknown to specialists  
 It was composed by Najm al D n al Misr a rather shadowy figure in Cairo ca 1330 The edition is accompanied by a detailed  
 technical and historical commentary which is framed as a self standing essay on Islamic mathematical instrumentation While  
 this essay commentary is mainly based on Najm al D n s treatise it also benefits from the consultation of a large number of  
 previously unstudied manuscripts and includes a discussion of all relevant sources from the period 800 1500 *Time in  
 Early Modern Islam* Stephen P. Blake, 2013-02-11 The prophet Muhammad and the early Islamic community radically  
 redefined the concept of time that they had inherited from earlier religions beliefs and practices This new temporal system  
 based on a lunar calendar and era was complex and required sophistication and accuracy From the ninth to the sixteenth  
 centuries it was the Muslim astronomers of the Ottoman Safavid and Mughal empires who were responsible for the major  
 advances in mathematics astronomy and astrology This fascinating study compares the Islamic concept of time and its  
 historical and cultural significance across these three great empires Each empire while mindful of earlier models created a  
 new temporal system fashioning a new solar calendar and era and a new round of rituals and ceremonies from the cultural  
 resources at hand This book contributes to our understanding of the Muslim temporal system and our appreciation of the  
 influence of Islamic science on the Western world
