The background of the slide is a painting of a rural landscape. In the foreground, a river flows from the left towards the center. On the left bank, there is a large, dark green tree. In the middle of the river, a small thatched hut is visible. The background shows rolling hills and a sky with soft, white clouds. The overall style is impressionistic, with visible brushstrokes and a vibrant color palette.

**Atmospheric Ozone Dynamics** Costas Varotsos, 2013-11-11 An increasing alllllo allce because of the anthropogenically induced ozone depletion and relevant illcrca5e of the surface ultraviolet UV radiation including erythema part of the UV spectrum has resulted in the growth of interest to total ozone TOZ surface and satellite observations surface UV measurements with an emphasis on UV B and the interpretation of observation results to assess potential impacts of the UV radiation enhancement on man and biosphere. The significance of this phenomenon is different in various countries. Special attention has been paid for instance to ozone depletion and UV radiation increase at high latitudes; this problem has also been discussed during the Workshop. It is equally clear however that low and mid latitude environmental dynamics requires careful monitoring and assessment of environmental trends as well. Such a conclusion is especially true for the Mediterranean Region where numerous resort places are located and subject to excessive levels of Solar Ultraviolet Radiation. This is why the NATO Advanced Research Workshop Ground Level and Satellite Ozone Observations Changes in the Mediterranean Region was organized and took place in Athens Greece during the time period 31 October - 4 November 1995. It should be pointed out however that presentations discussed during the Workshop went far beyond the regional scale of consideration. This has been very important because it opened an opportunity to analyse the Mediterranean environmental situation in the broader context of the European global changes.
