Matson, 1966      The Broken Image Floyd N. Matson, 1966      *The American Deists* Kerry S. Walters, 2021-10-08 Challenging carved in stone tenets of Christianity deism began sprouting in colonial America in the early eighteenth century was flourishing nicely by the American Revolution and for all intents and purposes was dead by 1811 Despite its hasty demise deism left a theological legacy Christian sensibility would never be quite the same Bringing together the works of six major American deists Benjamin Franklin Thomas Jefferson Ethan Allen Thomas Paine Elihu Palmer and Philip Frenau and the Frenchman Comte de Volney whose writings greatly influenced the American deists Kerry Walters has created the fullest analysis yet of deism and rational religion in colonial and early America In addition to presenting a chronological collection of several works by each author he provides a description of deism's historical roots its major themes its social and political implications and the reasons for its eventual demise as a movement Essential readings from the three major deistic periodicals of the period Temple of Reason Prospect and the Theophilanthropist also are included in the volume This is the first time they have been reprinted since their original publication American deism is more than merely an antiquated philosophical position possessing only historical interest Walters contends Its search for a religion based upon the ideals of reason nature and humanitarianism rather than the blind faith scriptural inerrancy and miracles preached by Christian churches at the time continues to offer insight of real significance      Metatheory in Social Science Donald Winslow Fiske, Richard A. Shweder, 1986-03-15 What is the nature of the social sciences What kinds of knowledge can they and should they hope to create Are objective viewpoints possible and can universal laws be discovered Questions like these have been asked with increasing urgency in recent years as some philosophers and researchers have perceived a crisis in the social sciences Metatheory in Social Science offers many provocative arguments and analyses of basic conceptual frameworks for the study of human behavior These are offered primarily by practicing researchers and are related to problems in disciplines as diverse as sociology psychology psychiatry anthropology and philosophy of science While various points of view are expressed in these nineteen essays they have in common several themes including the comparison of social and natural science the role of knowledge in meeting the demands of society and its pressing problems and the nature and role of subjectivity in science Some authors hold that subjectivity cannot be studied scientifically others argue that it can and must be if progress in knowledge is to be made The essays demonstrate the philosophical pluralism they discuss and give a wide range of alternative positions on the future of the social and behavioral sciences in a postpositivist intellectual world      *Politics in the Human Interest* William David Du Bois, R. [The Routledge Handbook of Dehumanization](#) Maria Kronfeldner,2021-02-25 A striking feature of atrocities as seen in genocides civil wars or violence against certain racial and ethnic groups is the attempt to dehumanize to deny and strip human beings of their humanity Yet the very nature of dehumanization remains relatively poorly understood The Routledge Handbook of Dehumanization is the first comprehensive and multidisciplinary reference source on the subject and an outstanding survey of the key concepts issues and debates within dehumanization studies Organized into four parts the Handbook covers the following topics The history of dehumanization from Greek Antiquity to the 20th century contextualizing the oscillating boundaries dimensions and hierarchies of humanity in the history of the West How dehumanization is contemporarily studied with respect to special contexts as part of social psychology as part of legal studies or literary studies and how it connects to the idea of human rights disability and eugenics the question of animals and the issue of moral standing How to tackle its complex facets with respect to the perpetrator s and the target s perspective metadehumanization and selfdehumanization rehumanization social death status and interdependence as well as the fear we show toward robots that become too human for us Conceptual and epistemological questions on how to distinguish different forms of dehumanization and neighboring phenomena on why dehumanization appears so paradoxical and on its connection to hatred essentialism and perception Essential reading for students and researchers in philosophy history psychology and anthropology this Handbook will also be of interest to those in related disciplines such as politics international relations criminology legal studies literary studies gender studies disability studies or race and ethnic studies as well as readers from social work political activism and public policy

The A.S.M.R. Asheru Romanha, 2024-02-12 This book shows the automatic spontaneous intelligent design from a feedback loop between the right hemisphere matching by form and the resulting sacred fractal geometry of self-similar sexual mimicry in the four-dimensional human body. He shows how this is done through the ASMR and thrill intelligence. The missing link is no longer missing. His book is a magnum opus on the alchemy of this subject

*Technical Fouls* John Kurt Jacobsen, 2018-02-07 What is it that shapes the direction of technological progress in advanced industrial societies? Is it science? Technology itself? Or is it something even more powerful and all-encompassing like power or money or politics? John Kurt Jacobsen addresses this topic by investigating how contemporary democratic capitalist states govern the development and deployment of their scientific and technological resources. He examines the interaction of ideology, profits, and power and their combined effect upon technology policy in democracies. The social function of science has been a contentious area of scholarly study throughout the second half of the twentieth century. Although the book focuses mainly on the United States for the sake of instructive comparison, it also studies technological development of other societies including the former Soviet Union and China. Some competing accounts of technical change across the borders include laissez-faire cultural and neo-Marxist markets. In fact, with regard to laissez-faire markets, even to inquire if science has a social function is to deviate from the appropriate images of economic development. What is always politically at stake is who will rule the next stage in production due to each swing in technology, which will in turn be associated with a new structure of control. Most recently, the microchip revolution and cyberspace are the most highly publicized candidates for the next upswing in technology and thus the next new structure of control. The explanatory focus of the book is on ideology or on ideas about how technology works and should work, and the three key areas of policy contention discussed are industrial development, military uses, and the environment. Students and scholars of science, technology, and sociology should find this book useful in coming to terms with the fundamental questions underlying the development of technology today

**The Planetary Emergency** Kent D. Shifferd, 2021-02-02 Earth and its inhabitants face an unprecedented crisis: the human-caused destruction of the planet's life support systems. Deteriorating climate, bringing super storms, mass forest fires, melting glaciers, droughts, extreme heat, and rising seas; a decline in food production, soil loss, water pollution, and declining fisheries all threaten the future of life on earth with a looming extinction event not seen for 60 million years. Beginning in the 17th century, we developed a civilization based on radical materialism, exploitation of natural resources, and the myth of endless economic growth. For all its technological wonders, this hypercivilization has proven unsustainable. This book explores ways we can create an ecocivilization compatible with the laws and limits of nature, a new way of living already developing with new technologies, new forms of social organization, and a new story about
