Paestum. From building site to temple Gabriel Zuchtriegel, 2021-02-09T00:00:00+01:00 There were numerous divine dwellings at Paestum just as there were in other Greek cities around the Mediterranean The Temple of Neptune is simply the most well preserved example Next to it stands the Basilica the oldest of the three great Doric buildings at Paestum c 560 520 BC Further north beyond the Roman forum which stands on the area previously occupied by the ancient agora a marketplace and a square where assemblies and other meetings were held in the Greek period a small hill is crowned by the temple of Athena the only one for which the identity of the deity worshipped there is definitely known Gabriel Zuchtriegel A masterful rigorous and accessible guide updated to the latest archaeological discoveries of the best preserved and enhanced archaeological site of Magna Graecia **Third Harbor Tunnel, I-90/Central Artery, I-93, Boston** ,1985

Carbon-Neutral Architectural Design Pablo M. La Roche, 2011-12-15 The energy used to operate buildings is one of the most significant sources of greenhouse gas emissions To lessen the human impact on climate it is necessary to reduce these building related emissions New legislation as well as market and financial pressures are driving architects and developers to create low carbon buildings While it is possible to achieve many of these reductions through appropriate climate responsive design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field Carbon Neutral Architectural Design describes how to reduce building related greenhouse gas emissions through appropriate design techniques This full color book presents strategies and methods to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies Strategies for Designing Buildings with a Smaller Carbon Footprint Examining climate change and its relationship with buildings the book begins with a look at the sources of emissions and how these are produced as a result of interactions between buildings and the surrounding environment It then introduces a carbon neutral architectural design process CNDP and a roadmap that can be adjusted for different types of projects Discussing climate analysis and solar geometry the book explores how understanding the climate where a building is located helps to identify the design strategies that are best suited to that location whether warm and humid warm and dry temperate or cold It looks at psychrometrics and how to achieve thermal comfort with minimum emissions The book also explains how building fabric can be used to control energy flows by conduction radiation and convection helping to reduce overheating and overcooling and how to incorporate passive cooling and heating systems through appropriate design The book includes useful references equations and illustrations as well as a comparison of free carbon counting tools that can be used for residential building design Drawing on the author's extensive experience in teaching and practice this is a valuable resource for anyone who wants to reduce the carbon footprint of buildings Find more study resources at the American Institute of Architects Carbon Neutral Design Project web site What's next for green building See what Dr La Roche has to say in this video on the HMC Architects blog **2006 Building**

Acting Bodies and Social Networks Bianca Maria Pirani, Ivan Varga, 2009-12-15 Acting Bodies and Social Networks analyzes the complex interactions of body mind and microelectronic technologies Internationally renowned scholars look into the nature of the mind a combination of thought perception emotion will and imagination as well as the ever increasing impact and complexity of microelectronic technologies The proliferation of these technologies facilitates a profound change in the boundaries between bodies and technologies These technologies expand the temporal and spatial existence of humans today people can instantly communicate all over the world and

overcome time and space restraints by using the latest available microelectronic technologies The first volume *The Body as Social Icon* examines how memory is affected by the new technology and the related theoretical issues while the second *Mapping Bodies in a Networked Space* deals with the influence of the new technologies on everyday life practices At the information portal the brain's capacity is losing its ability to retain information In 2004 a number of well known neuroscientists including Nobel laureate Eric Kandel wrote a review about the ethical dilemma computer technologies raise stating that humanity's ability to alter its own brain function might well shape history as powerfully as the development of metallurgy in the Iron Age By introducing the concept of acting body this book contributes to discussion concerning the future development of Homo sapiens We consider the acting body as a bridge between technology and working memory which entails a radical change in our approach to the social sciences
