Biochemical Modulation of Skin Reactions Agis F. Kydonieus, John J. Wille, 1999-12-15 Like almost every major scientific or medical breakthrough in history the transdermal delivery of drugs started as only an idea slowly moving its way from the drawing board to actual testing and eventually approval Today there are more than 20 companies involved in transdermal drug delivery In addition almost every large pharmaceutical firm has ongoing transdermal delivery programs But in spite of this effort and after 15 years from the introduction of the Nitroglycerin patch only six transdermal drugs exist in the marketplace The practice has been hampered by the fact that most drugs as well as many excipients used in the manufacture of transdermal patches cause skin irritation or skin sensitization Similar problems exist with the application of dermatologicals and cosmetics to skin which in many cases are equally as severe as those encountered in transdermal delivery Biochemical Modulation of Skin Reactions Transdermals Topicals Cosmetics presents a series of chapters describing

technologies and the practical application of biochemicals which might lead to the reduction or abrogation of these skin reaction In addition it addresses those areas of skin immunology and skin sciences that account for the processes that control irritant and allergic contact dermatitis and outlines the numerous cellular and molecular factors involved in the development of irritation and sensitization Indeed Biochemical Modulation of Skin Reactions helps serve as a catalyst for further research in the field allowing for more drugs and cosmetics to be applied to the skin without adverse effects Features **Cutaneous**

Cutaneous Drug Eruptions John C. Hall, Brian J. Hall, 2015-08-21 The burden of cutaneous drug reactions is significant in both outpatient and inpatient settings and can result in morbidity and even mortality This book is unique in its approach to this problem This text is divided into basic principles common drug reactions skin conditions mimicked by drug reactions drug reactions to the skin appendages life threatening drug reactions less common drug reactions and special groupings of drug reactions For the clinician the skin can only morphologically react in too many limited ways This is also true for the pathologist Combining these two forever linked specialties is a synergistic paradigm that greatly enhances diagnosis and ultimately therapy for these pernicious conditions Drug reactions in the skin remain a common complication of therapy True incidences of drug reactions are not available For general discussion the rule of 3% can be applied with reasonable assuredness Approximately 3% of all hospitalized patients develop an adverse cutaneous drug reaction Approximately 3% of these reactions are considered severe Outpatient data is even more obscure but at least 3% of dermatology clinic outpatient visits are due to a drug reaction Cutaneous drug reactions compromise approximately 3% of all drug reactions Even more

challenging is the fact that the most vulnerable populations to drug reactions are increasing and include the elderly patients on prolonged drug therapy and patients that use multiple drugs at the same time
