

# SLEEP & AGING

## WHAT'S NORMAL?

Aging itself doesn't seem to account for sleep complaints in older adults. If you're not happy with your sleep, talk with your doctor about possible causes and healthy ways to improve it, says Johns Hopkins sleep researcher Adam Spira, Ph.D.

### NATURAL SLEEP CHANGES

FALLING ASLEEP AND WAKING UP EARLIER

MORE TIME IN LIGHTER SLEEP

MORE AWAKENINGS—3-4X/NIGHT

#### NOTE

CHANGES IN PART OF BRAIN THAT CONTROLS SLEEP + NATURALLY LOWER LEVELS OF GROWTH HORMONE AND MELATONIN

### THE SLEEP DIFFERENCE

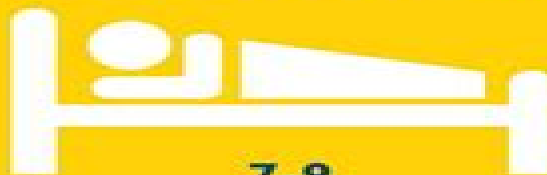

**POOR SLEEP IS LINKED TO HIGHER RISK FOR FALLS, DEPRESSION AND DEMENTIA + MORE DIFFICULTY MANAGING CONDITIONS LIKE CHRONIC PAIN, DIABETES AND HEART DISEASE**

### IS YOUR SLEEP HEALTHY?

**1:3**  
HAS TROUBLE FALLING ASLEEP

**1:4**  
HAS OBSTRUCTIVE SLEEP APNEA

**1:8**  
HAS RESTLESS LEGS SYNDROME

**7-9**  
HOURS OF SLEEP. WHAT A HEALTHY, OLDER ADULT NEEDS

### KNOW THE SLEEP STEALERS

LONG OR LATE NAPS

CAFFEINE IN THE AFTERNOON OR EVENING

LACK OF EXERCISE

"SCREEN TIME" CLOSE TO BEDTIME

CERTAIN HEALTH CONDITIONS

NIGHTTIME BATHROOM TRIPS

Eighty percent of adults age 60 and older are awakened by the need for nighttime bathroom trips. Underlying causes may include diabetes, enlarged prostate, infections and kidney disease.

MEDICATIONS

Alpha-blockers and beta-blockers (for high blood pressure and heart disease), selective serotonin reuptake inhibitors (for depression), steroids, cold medicines, diuretics, nicotine gum and patches, and more can interfere with sound sleep.

**Sleep, Aging and Related Disorders** W. Emser,D. Kurtz,W. B. Webb,1987-03-17      *Aging and Age-Related Disorders* Stephen Bondy,Kenneth Maiese,2010-09-02 Features that characterize the aging process include the gradual accumulation of cell damage after prolonged exposure to oxidative and inflammatory events over a lifetime In addition to the accretion of lesions the intrinsic levels of pro oxidant and aberrant immune responses are elevated with age These adverse events are often further enhanced by the chronic and slow progressing diseases that characterize the senescent brain and cardiovascular system The incidence of some disorders such as Alzheimer s disease and vascular diseases are sufficiently prevalent in the extreme elderly that these disorders can arguably be considered normal Aging and Aging Related Disorders examines the interface between normal and pathological aging and illustrates how this border can sometimes be diffuse It explores and illustrates the processes underlying the means by which aging becomes increasingly associated with inappropriate levels of free radical activity and how this can serve as a platform for the progression of age related diseases The book provides chapters that examine the interactive relationship between systems in the body that can enhance or sometimes even limit cellular longevity In addition specific redox mechanisms in cells are discussed Another important aspect for aging discussed here is the close relationship between the systems of the body and exposure to environmental influences of oxidative stress that can affect both cellular senescence and a cell s nuclear DNA What may be even more interesting to note is that these external stressors are not simply confined to illnesses usually associated with aging but can be evident in maturing and young individuals A broad range of internationally recognized experts have contributed to this book Their aim is to successfully highlight emerging knowledge and therapy for the understanding of the basis and development of aging related disorders      Encyclopedia of Sleep ,2013-01-17 In a world of 24 hour media saturation sleep has become an increasingly fraught enterprise The award winning four volume Encyclopedia of Sleep Four Volume Set is the largest reference either online or in print on the subject of sleep Written to be useful for the novice and the established researcher and clinician Topic areas will include sleep across the life cycle and in other species sleep and women sleep and the elderly pediatric sleep sleep deprivation and loss sleep mechanisms sleep physiology and pathophysiology sleep disorders neurobiology chronobiology pharmacology and impact of other disorders on sleep Recognizing the many fields that are connected to sleep science the editorial team has been carefully chosen to do justice to this highly interdisciplinary field of study The steady growth of researchers and clinicians in the sleep field attests to the continued interest in the scientific study of sleep and the management of patients with sleep disorders and anyone involved in this exciting field should find this work to be an invaluable reference 2013 PROSE Award winner for Multivolume Reference in Science from the Association of American Publishers Thoroughly interdisciplinary looks at sleep throughout the life cycle with exceptional coverage of basic sleep concepts the physiology of sleep as well as sleep disorders of all descriptions Excellent coverage of sleep and special

**Aging and Age-related Diseases** Michał Karasek, 2006 Ageing has become a great problem for many countries Due to world wide life prolongation the number of people over 60 years old has grown rapidly into a ten percent piece of the world population The growing age of the world population raises many social economical and medical problems The proportion of people in the economically active age groups to those who are over 65 is constantly decreasing A major consequence of the increasing numbers of individuals in advanced age groups is increasing numbers of patients suffering from age related diseases The aim of this book is to present the basic data on human ageing as well as on age related diseases

**Aging and Age-Related Disorders From Molecular Mechanisms to Therapies** Vladimir Titorenko, 2019-08-19 Aging of unicellular and multicellular eukaryotic organisms is a convoluted biological phenomenon which is manifested as an age related functional decline caused by progressive dysregulation of certain cellular and organismal processes Many chronic diseases are associated with human aging These aging associated diseases include cardiovascular diseases chronic obstructive pulmonary disease chronic kidney disease diabetes osteoarthritis osteoporosis sarcopenia stroke neurodegenerative diseases including Parkinson s Alzheimer s and Huntington s diseases and many forms of cancer Studies in yeast roundworms fruit flies fishes mice primates and humans have provided evidence that the major aspects and basic mechanisms of aging and aging associated pathology are conserved across phyla The focus of this International Journal of Molecular Sciences Special Issue is on molecular and cellular mechanisms diagnostics and therapies and diseases of aging Fifteen original research and review articles in this Special Issue provide important insights into how various genetic dietary and pharmacological interventions can affect certain longevity defining cellular and organismal processes to delay aging and postpone the onset of age related pathologies in evolutionarily diverse organisms These articles outline the most important unanswered questions and directions for future research in the vibrant and rapidly evolving fields of mechanisms of biological aging aging associated diseases and aging delaying therapies

**Reviews on New Drug Targets in Age-Related Disorders** Paul C. Guest, 2020-04-17 Aging is an inevitable part of life and is becoming a worldwide social economic and health problem This is mainly due to the fact that the increasing proportion of individuals in the advanced age category have a higher probability of developing age related disorders such as type II diabetes mellitus cardiovascular disorders sarcopenia and neurodegenerative conditions New therapeutic approaches are still needed to decrease or slow the effects of such diseases Advances in omic technologies such as genomics transcriptomics proteomics and metabolomics have significantly advanced our understanding of disease in multiple medical areas as the analysis of

multiple molecular networks has simultaneously provided a more integrated view of disease pathways. It is hoped that emerging hits from these analyses might be prioritized for further screening as potential novel drug targets for increasing the human healthspan in line with the lifespan. In turn, this will lead to new therapeutic strategies as well as drug development projects by the pharmaceutical industry. This book presents a series of reviews describing studies that have resulted in identification of new potential drug targets for age-related disorders. Much of this information has come from omic comparisons of healthy and disease states or from testing the effects of new therapeutic approaches. Authored by experts from around the globe, each chapter is presented in the context of specific chronic diseases or therapeutic strategies. This book is designed for researchers in the areas of aging and chronic disease as well as clinical scientists, physicians, and stakeholders in major drug companies. Handbook of the Neuroscience of Aging Patrick R. Hof, Charles V.

Mobbs, 2010-05-22. A single volume of 85 articles, the Handbook of the Neurobiology of Aging is an authoritative selection of relevant chapters from the Encyclopedia of Neuroscience, the most comprehensive source of neuroscience information assembled to date. AP Oct 2008. The study of neural aging is a central topic in neuroscience, neuropsychology, and gerontology. Some well-known age-related neurological diseases include Parkinson's and Alzheimer's, but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems, including impairments in vision, memory loss, muscle weakening, and loss of reproductive functions, changes in body weight, and sleeplessness. As the average age of our society increases, diseases of aging become more common, and conditions associated with aging need more attention by doctors and researchers. This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system. Coverage ranges from animal models to human imaging, fundamentals of age-related neural changes, and pathological neurodegeneration, and offers an overview of structural and functional changes at the molecular, systems, and cognitive levels. Key pathologies such as memory disorders, Alzheimer's dementia, Down syndrome, Parkinson's, and stroke are discussed, as are cutting-edge interventions such as cell replacement therapy and deep brain stimulation. There is no other current single-volume reference with such a comprehensive coverage and depth. Authors selected are the internationally renowned experts for the particular topics on which they write, and the volume is richly illustrated with over 100 color figures. A collection of articles reviewing our fundamental knowledge of neural aging, the book provides an essential, affordable reference for scientists in all areas of Neuroscience, Neuropsychology, and Gerontology. The most comprehensive source of up-to-date data on the neurobiology of aging, review articles cover normal sensory and cognitive aging, neuroendocrine, structural, and molecular factors, and fully address both pathology and intervention. Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled: Encyclopedia of Neuroscience, synthesizing information otherwise dispersed across a number of journal articles and book chapters, and saving researchers the time-consuming process of finding and

integrating this information themselves Offering outstanding scholarship each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors representing 11 countries Provides more fully vetted expert knowledge than any existing work with broad appeal for the US UK and Europe accurately crediting the contributions to research in those regions Fully explores various pathologies associated with the aging brain Alzheimer s dementia Parkinson s memory disorders stroke Down s syndrome etc Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers Heavily illustrated with over 100 color figures Insights in parkinson's disease and aging related movement disorders Robert Petersen,Benjamin L.
