Field Guide to Grasses of California James P. Smith Jr., 2014-09-12 Grasses and grasslands are of increasing interest to conservationists biologists and gardeners There are more than 300 species of native California grasses and they are found in almost every climate from cool wet forests to hot dry deserts Native grasses are also important to land restoration as they improve soil quality increase water infiltration and recycle nutrients Their deep roots can tap soil water which allows them to stay green year round and to act as fire buffers around residences Native grasses also provide vital habitat for many species of insects birds reptiles and mammals Despite their importance grasslands remain one of the most

underprotected of California s vegetation types and native grasslands have undergone the greatest percentage loss of any habitat type in the state Grasses are also among the most difficult plants to identify Organized alphabetically Field Guide to Grasses of California covers common native and naturalized grasses and to help identify them also features over 180 color illustrations **San Bernardino National Forest Land and Resource Management Plan 1988: Appendices** ,1988

Whittaker** R.K. Peet,2012-12-06 R K Peet Dep of Botany University of North Carolina Chapel Hill N C 27514 USA Robert Whittaker s contributions to ecology were many and remarkably varied His publication record will long stand as a monument to his greatness and whatever we do to honor him will likely be rather small in comparison Less well known were his personal interactions and the impact they had on the development of ecology as well as individual scientists Over the years he touched many of us and we felt not just a professional but also a deep personal loss in his passing After his death I was contacted by numerous colleagues who wondered what they might do to honor him Whittaker had long served on the editorial board of Vegetatio which prompted Eddy van der Maarel to suggest that a series of papers in the journal might be a fitting memorial and so this project was conceived Whittaker was a master of synthesis and during his career he published numerous review papers which showed clearly how his work related to and built on that of others For this reason it seemed inappropriate and redundant to solicit papers reviewing areas to which Whittaker made important contributions Instead I chose to solicit research papers illustrating current applications of approaches Whittaker developed and showing a few of the recent advances which have grown directly from his pioneering work
