Karlson,1975 *Understanding Psychological Testing in Children* Stewart Gabel,G.D. Oster,S.M. Butnik,2013-06-29 There is a considerable amount of interest within pediatrics and primary health

care that is currently being directed toward the behavioral and emotional problems of childhood. Traditionally these areas have been emphasized by child psychiatrists, child psychologists, and psychiatric social workers. Now, however, the detection and in some cases the assessment and treatment of children with these types of disturbances fall within the province of primary child health care professionals. Even when the child psychiatrist or child psychologist provides the primary mental health treatment for the child, specialists such as pediatricians, family physicians, pediatric nurses, pediatric nurse practitioners, and speech therapists remain instrumental in support of the ongoing psychotherapeutic process as providers of some other aspect of total health care to the child and family. For these pediatricians, family physicians, and other nonpsychologist primary health care providers, it is essential to acquire an understanding and effective working knowledge of important psychological information and concepts to utilize within their own framework and professional responsibilities. In order that this may be accomplished, these professionals with limited backgrounds in psychology must better understand how psychologists themselves assess children and how they derive the conclusions reflected in the statements and reports that are shared with members of their own and other disciplines. In short, nonpsychologists must become substantially more familiar with psychological assessment, particularly with psychological testing and the subsequent reporting of results.

Periodicals Library of Congress. Copyright Office, 1977. **Effective Interviewing of Children** Michael Zwiers, Patrick J.

Morrisette, 2013-08-21. Interviews comprise the majority of professionals' interactions with children. In order to conduct effective interviews, professionals must possess effective communication skills as well as knowledge of growth and developmental issues, data collection, and analysis. Though this is an important area of study, there has yet to be a book that effectively addresses this topic. In most cases, students studying to become clinicians are forced to rely on the observations of practicing professionals to learn child-focused interview techniques. *Effective Interviewing of Children* is unique in that it is the only comprehensive resource for information on child-focused interviews. The authors differentiate between child and adult-focused interviews, present an integrated account of the literature on child-focused interviews, and offer techniques and suggestions for addressing developmental differences. Chapters address a wide range of topics, including child and professional variables, effective use of language, children with special needs, ethics in interviewing, research interviews, and diagnostic clinical interviews. Aimed at upper-level undergraduate and graduate students, this book is essential for clinically oriented programs such as mental health counseling, social work, psychology, and marriage and family therapy. The book is also of interest to practicing professionals who seek to expand their knowledge of child-focused interview techniques.
