

STANDARDIZED ASSESSMENTS 101

Occupational Therapy (OT) standardized assessments are scientifically designed tests that measure a child's performance in an given area related to occupational therapy. These tools are standard and consistent, meaning they are given the same way every time no matter who administers the assessment.

The following are terms that may be helpful to understand your child's results.

Raw score: This is the number of points or correct answers scored. This alone does not tell us enough information on standardized testing.

Standard score: Standard scores help compare a child's performance to that of same age peers using a bell curve. These are usually based on a scale where the average score is set to 100, with a typical range being between 85-115.

Percentile Rank: The percentage shows how a child scored when compared the their whole of their peers of the same age. With 50% being in the middle, a score of 25% percentile may indicate need for assistance in that area while a 90th percentile scoring is an area of strength.

Age equivalent: This is the age or grade level that the score most similar to. This is another factor to look at however can be misleading without looking at all the other areas.

T Score or Z Score: These are more specialized ways of looking at how a score compares to a large group of same aged individuals. T-scores generally have a mean of 50 and a standard deviation of 10, while Z-scores have a mean of 0 and a standard deviation of 1.

Descriptive term: These are terms the test provides for scores such as "above average", "below average" which help describe overall performance.
