Small Molecular Immunomodifiers of Microbial Origin Hamao Umezawa, 2014-05-09 Small Molecular Immunomodifiers of Microbial Origin Fundamental and Clinical Studies of Bestatin focuses on the results of experimental and clinical studies suggesting that bestatin and small molecular weight immunity enhancing agents can contribute to the treatment of cancer and resistant infections The selection first offers information on the screening discoveries and genetics of microbial secondary metabolites and activity of bestatin Topics include the effect of bestatin on colony formation of murine bone marrow progenitor cells in vitro antitumor effect of bestatin on murine transplantable tumors and structures and properties of bestatin amastatin forphenicine and esterastin The text then examines the effects of bestatin on DNA and RNA metabolism in T cells and levamisole and bestatin in immunodeficient aged mice The text examines the influence of bestatin on the lymphoid system in humans natural killer activity and bone marrow The preliminary phase I study of bestatin in lung cancer cases and malignant skin tumors are discussed Topics include dosage schedule clinical findings and changes in immunological parameters The selection is a vital reference for readers interested in the applications of bestatin in the treatment of cancer and resistant infections ImmunoPharmaceuticals Edward S. Kimball, 1995-11-27 Written by a leading researcher in immunology ImmunoPharmaceuticals specifically focuses on immunologically active drugs recently tested for clinical activity or recently approved for medical use Each chapter focuses on a single drug or class of drugs and discusses data from basic and preclinical research concerning mechanisms of action Preclinical models are compared with clinical findings to allow the reader to evaluate the predictive value of those models Featured drugs are being studied for therapy of cancer arthritic disease autoimmune disease immunodeficiency disease transplantation and determination of sepsis Overviews of the retinoids in cancer therapy and preclinical studies on flavonoids are featured Natural Immunity, Cancer and Biological Response Modification E. Lotzová, R. B. Hebermann, 1986-11-24 Biochemistry of Peptide Antibiotics Horst Kleinkauf, Hans von Döhren, 2019-07-22 No detailed description available for Biochemistry of Peptide Antibiotics

Screening for Biological Response Modifiers: Methods and Rationale James E. Talmadge, Isaiah J. Fidler, R.K. Oldham, 2012-12-06 The observation in the 1950s that nitrogen mustard and other toxic chemicals could induce antitumor responses in patients with refractory lymphoma initiated a massive search for active chemotherapeutic agents The initial observations stimulated a search for new chemotherapeutic agents which might have increased antitumor activity with less toxicity for normal tissues To aid in the search for these new chemicals and to attempt to distinguish among the many toxic chemicals which might be candidates for clinical studies the National Cancer Institute the pharmaceutical industry and the cancer research laboratories of most Western nations developed systems for screening drugs for antitumor activity Perhaps the most extensive screening program was established by the National Cancer Institute 1 This screening program has evolved over the last two decades an evolution which has been repeatedly reviewed 2 5 Various screening programs in use

have examined over 500 000 compounds as potential anticancer agents From these there are now approximately forty anticancer drugs in clinical use The utility of these compounds and their toxicities have been reviewed on many occasions It is now apparent that more active and less toxic anticancer drugs are needed It is also clear that the current screening programs are identifying compounds with similar levels of activity and with continuing moderate to severe toxicity 6

Marine Biochemistry Se-Kwon Kim, 2022-10-12 This book provides the latest comprehensive methods for isolation and other novel techniques for marine product development Furthermore this book offers knowledge on the biological medical and industrial applications of marine derived medicinal food substances There has been a tremendous increase in the products derived from marine organisms for commercial application in industries every year Functional foods of medicinal value are particularly in demand as new technology allows the stabilization of natural ingredients and their availability in pure forms to solve various human diseases Marine flora and fauna have essential elements and trace minerals that nurture various hormones produced in the endocrine system to regulate the respective metabolisms thereby providing a safe and healthy life to humans The overall presentation and clear demarcation of the contents by worldwide contributions is a novel entry point into the market of medicinal foods from the sea The exploration of marine habitats for novel materials are discussed throughout the book The exploration and exploitation of the biochemistry of sea flora and fauna are limited and this book extends the research possibilities into numerous marine habitats Various approaches for extracting and applying

the flora and fauna are discussed This book will be of value to researchers marine biotechnologists and medical practitioners due to the vast information as well as industrial and medical applications of marine substances all in one place

Structure-Activity Relationships of Anti-Tumour Agents D.N. Reinhoudt, T.A. Connors, H.M. Pinedo, K.W. van de Poll, 2012-12-06 The Workshop series of the Koningin Wilhelmina Fonds is a feature of the interest of this Foundation to promote research and education in the field of cancer aiming to improve prognosis of the cancer patient For almost a century surgery has now been the main treatment modality for the cancer patient During the past 50 years radiation therapy has developed as a second important modality of treatment However neither of the two modalities are able to cure the majority of cancer patients as the disease is so often metastasized at presentation Cancer chemotherapy is a modality which does have the potential to cure patients with this advanced stage of disease In recent years the three modalities have been combined more and more and here is one of the reasons why the perspectives for the cancer patient have improved so much In addition certain types of cancers such as testicular carcinoma childhood tumors choriocarcinoma non Hodgkin lymphomas and others can now indeed often be cured by chemotherapy alone even if the disease is advanced The combination of drugs and the use of new drugs have greatly contributed to this development There are two main groups of new drugs analogs and new structures A great number of analogs of conventional structures have been developed during the past ten years A typical example of this group is adriamycin which is an analog of daunomycin

Ectopeptidases Jürgen Langner, Siegfried Ansorge, 2012-12-06 The idea to compile recent results on the ectoenzymes aminopeptidase N CD13 and dipeptidylpeptidase IV CD26 arose from the great interest given by readers world wide to the two proceedings volumes edited by us in 1997 and 2000 Ansorge and Langner 1997 Langner and Ansorge 2000 These volumes contained the presentations at two symposia held in Magdeburg Germany in 1996 and 1999 under the title Cellular peptidases in immune functions and diseases which was also the name of the Sonderforschungsbereich in Magdeburg sponsored by the Deutsche Forschungsgemeinschaft between 1995 and 2001 Our groups in Magdeburg and Halle during the last two decades have provided results on these two enzymes in cells of the hematopoietic system that justify a review in an edited monograph like the present one see the reviews by Kahne et al 1999 Lendeckel et al 1999 Riemann et al 1999 There are however many other groups in Europe US and Japan which made important contributions to this field and particularly in topics improving the understanding of physiological and pathophysiological roles of APN CD13 and DPPIV CD26 Therefore we decided to invite some of them to contribute reviews of their results to this book Having worked for about 40 years in the field of proteolysis for both of us to see the development of activities and knowledge from protein chemistry and enzymology to physiology and pathophysiology and even to therapy is very stimulating and fascinating Of course this development also reflects the dramatic improvement and refinement of methods
