

The book cover features a photograph of a vineyard. In the upper half, there are lush green grapevines with some leaves showing signs of aging or damage. Below the vines, a horizontal band of smooth, rounded stones in shades of yellow, tan, and grey is visible, likely representing a vineyard floor or a stone wall. The background is a clear, bright blue sky.

Terroir James E. Wilson (Geologist), 1998-01-01 The French word terroir is used to describe all the ecological factors that make a particular type of wine special to the region of its origin James E Wilson uses his training as a geologist and his years of research in the wine regions of France to fully examine the concept of terroir The result combines natural history social history and scientific study making this a unique book that all wine connoisseurs and professionals will want close at hand In Part One Wilson introduces the full range of environmental factors that together form terroir He explains France s geological foundation its soil considered the soul of a vineyard the various climates and microclimates the vines their history and how each type has evolved and the role that humans from ancient monks to modern enologists have played in viticulture Part Two examines the history and habitat of each of France s major wine regions Wilson explores the question of why one site yields great wines while an adjacent site yields wines of lesser quality He also looks at cultural influences such as migration and trade and at the adaptations made by centuries of vigneron to produce distinctive wine styles Wilson skillfully presents both technical information and personal anecdotes and the book s photographs maps and geologic renderings are extremely helpful The appendices contain a glossary and information on the labeling of French wines With a wealth of information explained in clear English Wilson s book enables wine readers to understand and appreciate the mystique of terroir The French word terroir is used to describe all the ecological factors that make a particular type of wine special to the region of its origin James E Wilson uses his training as a geologist and his years of research in the wine regions of France to fully examine the concept of terroir The result combines natural history social history and scientific study making this a unique book that all wine connoisseurs and professionals will want close at hand In Part One Wilson introduces the full range of environmental factors that together form terroir He explains France s geological foundation its soil considered the soul of a vineyard the various climates and microclimates the vines their history and how each type has evolved and the role that humans from ancient monks to modern enologists have played in viticulture Part Two examines the history and habitat of each of France s major wine regions Wilson explores the question of why one site yields great wines while an adjacent site yields wines of lesser quality He also looks at cultural influences such as migration and trade and at the adaptations made by centuries of vigneron to produce distinctive wine styles Wilson skillfully presents both technical information and personal anecdotes and the book s photographs maps and geologic renderings are extremely helpful The appendices contain a glossary and information on the labeling of French wines With a wealth of information explained in clear English Wilson s book enables wine readers to understand and appreciate the mystique of terroir [The Routledge Handbook of Wine and Culture](#) Steve Charters, Marion Demossier, Jacqueline Dutton, Graham Harding, Jennifer Smith Maguire, Denton Marks, Tim Unwin, 2022-04-26 This title was a prize winner at the OIV International Organisation of Vine and Wine Awards 2023 The link between culture and wine reaches back into the earliest history of humanity The Routledge Handbook of Wine and Culture

brings together a newly comprehensive interdisciplinary overview of contemporary research and thinking on how wine fits into the cultural frameworks of production intermediation and consumption. Bringing together many leading researchers engaged in studying these phenomena, it explores the different ways in which wine is constructed as a social artefact and how its representation and use acquire symbolic meaning. Wine can be analysed in different ways by varying disciplines involved in exploring wine and culture: anthropology, economics and business, geography, history and sociology, and as text. The Handbook uses these as lenses to consider how producers, intermediaries and consumers use and create cultural significance. Specifically, the work addresses the following: how wine relates to place, belief systems and accompanying rituals; how it may be used as a marker of the identity and mechanisms of civilising processes, often in conjunction with food and the arts; how its framing intersects with science and nature; the ideologies and power relations which arise around all these activities; and the relation of this to wine markets and public institutions. This is essential reading for researchers and students in education for the wine industry and in the humanities and social sciences engaged in understanding patterns of human ingenuity and interaction, such as sociology, anthropology, economics, health, geography, business, tourism, cultural studies, food studies and history.

The Geography of Wine Percy H. Dougherty, 2012-01-03. Wine has been described as a window into places, cultures and times. Geographers have studied wine since the time of the early Greeks and Romans, when viticulturalists realized that the same grape grown in different geographic regions produced wine with differing olfactory and taste characteristics. This book, based on research presented to the Wine Specialty Group of the Association of American Geographers, shows just how far the relationship has come since the time of Bacchus and Dionysus. Geographers have provided technical input into the wine industry with exciting new research tackling subjects such as the impact of climate change on grape production, to the use of remote sensing and Geographical Information Systems for improving the quality of crops. This book explores the interdisciplinary connections and science behind world viticulture. Chapters cover a wide range of topics from the way in which landforms and soil affect wine production to the climatic aberration of the Niagara wine industry to the social and structural challenges in reshaping the South African wine industry after the fall of apartheid. The fundamentals are detailed too, with a comparative analysis of Bordeaux and Burgundy, and chapters on the geography of wine and the meaning of the term *terroir*.
