Rajasekaran, 2008-11-20 Biologically inspired computing is different from conventional computing It has a different feel often the terminology does not sound like it talking about machines The activities of this computing sound more human than mechanistic as people speak of machines that behave react self organize learn generalize remember and even to forget Much of this technology tries to mimic nature's approach in order to mimic some of nature's capabilities They have a rigorous mathematical basis and neural networks for example have a statistically valid set on which the network is trained Two outlines are suggested as the possible tracks for pattern recognition They are neural networks and functional networks Neural Networks many interconnected elements operating in parallel carry out tasks that are not only beyond the scope of conventional processing but also cannot be understood in the same terms Imaging applications for neural networks seem to be a natural fit Neural networks love to do pattern recognition A new approach to pattern recognition using microARTMAP together with wavelet transforms in the context of hand written characters gestures and signatures have been dealt The Kohonen Network Back Propagation Networks and Competitive Hopfield Neural Network have been considered for various applications Functional networks being a generalized form of Neural Networks where functions are learned rather than weights is compared with Multiple Regression Analysis for some applications and the results are seen to be coincident New kinds of intelligence can be added to machines and we will have the possibility of learning more about learning Thus our imaginations and options are being stretched These new machines will be fault tolerant intelligent and self programming thus trying to make them smarter So as to make those who use the techniques even smarter Chapter 1 is a brief introduction to Neural and Functional networks in the context of Pattern recognition using these disciplines Chapter 2 gives a review of the architectures relevant to the investigation and the development of these technologies in the past few decades Retracted VIII Preface Chapter 3 begins with the look at the recognition of hand written alphabets using the algorithm for ordered list of boundary pixels as well as the Kohonen Self Organizing Map SOM Chapter 4 describes the architecture of the MicroARTMAP and its capability **The Boilermakers' Journal**, 1915 Benchmarks for Science Literacy Project 2061 (American Association for the Advancement of Science), 1993 Describes what students should know and be able to do in science mathematics and technology by the ends of grades 2 5 8 and 12 Illustrated Catalogue of Machine Tools, Wood
