

How Optical Fibre Works

Optical fibre is a very thin strand of glass or plastic capable of transmitting light from one point to another. It is also known as an optical waveguide, since it is a medium that guides light.

Data travels down the fibre in the form of light. Voice, video, text, all forms of digital data can be encoded into pulses of light and re-encoded into zeros and ones (the basic form of all digital information) at its destination.

A fibre optic communication system generally consists of five stages: An encoder or modulator connected to a transmitter processes the data from an electronic to optical signal and launches it into the fibre.

To avoid attenuation (a gradual loss in signal strength), repeaters are used to periodically amplify the signal during its passage through the optical cable.

When the signal arrives at the destination, it is received by a detector and reconverted to an electrical signal, which is then sent to a demodulator which decodes the structure of the original signal and which is sent on to the various devices.

Advantages of Fibre Optic Cable over Copper

Speed Fibre optic networks operate at high speeds - the NBN promises to deliver up to 100Mbps initially, but the network can be updated to deliver content into the gigabyte range.

Bandwidth Large carrying capacity.

Distance Signals can be transmitted further without needing to be "refreshed" or strengthened. In high quality fibre signals can be sent 30km before losing strength.

Resistance Fibre optic has far greater resistance to electromagnetic noise such as radios, motors or other nearby cables.

Maintenance Fibre optic cable networks cost less to maintain than copper networks.

Lenore Tawney Karen Patterson, 2019-10-04 Recent years have seen an enormous surge of interest in fiber arts with works made of thread on display in art museums around the world But this art form only began to transcend its origins as a humble craft in the late nineteenth and early twentieth centuries and it wasn t until the 1950s and 1960s that artists used the fiber arts to build critical practices that challenged the definitions of painting drawing and sculpture One of those artists was Lenore Tawney 1907 2007 Raised and trained in Chicago before she moved to New York Tawney had a storied career She was known for employing an ancient Peruvian gauze weave technique to create a painterly effect that appeared to float in space rather than cling to the wall as well as for being one of the first artists to blend sculptural
