Features: Identifies the values that are unique to the engineering and computing professions and promotes a general understanding of what it means to be a member of a profession. Explains how ethical and legal considerations play a role in engineering practice. Discusses the importance of professional communication and reflective practice to a range of audiences. Presents the practices of leadership, innovation, entrepreneurship, safety, and sustainability in engineering design. Analyzes and discusses the contemporary practices of project management, artificial intelligence, and professional career development.

The Practical Real-Time Enterprise Bernd Kuglin, 2005-02-21

The basic idea of the real-time enterprise is to become quicker. A business which wants to become a real-time enterprise has to acquire three main abilities. Internal and external data is integrated quickly and in real time in a well-organized company data pool. Analyses of information in the company data pool can be obtained in real time across function boundaries and at the touch of a button. The number of working steps performed in batch mode is shifting dramatically in favor of immediate completion in real time. The issue of communications or real-time communications plays a special role here. Studies have shown that processing times sometimes double when necessary communication events are handled in batch mode in the business process and not in real time. In other words, when an activity cannot be completed and lies around for days because an urgently needed partner cannot be contacted. The necessity of acquiring these three abilities has implications for the process-related technical and organizational aspects of a business that are dealt with in detail in this book.
