Specify the mechanistic structural design approach unique to ultra heavy wheel loading associated with OTR mine trucks Describe the selection application and management of the road wearing course material together with its rehabilitation including the use of palliatives Develop road and operating cost models for estimating total road user costs based on road rolling resistance measurement and modelling techniques Illustrate the approach of costing a mining road construction project based on the design methodologies previously introduced List and describe future trends in mine haulage system development how mining haul road design will evolve to meet these new system challenges and how the increasing availability of data is used to manage road performance and ultimately provide 24x7 trafficability Mining Haul Roads Theory and Practice is a complete practical reference for mining operations contractors and mine planners alike as well as civil engineering practitioners and consulting engineers It will also be invaluable in other fields of transportation infrastructure provision and for those seeking to learn and apply the state of the art in mining haul roads This book is the most definitive treatise on mining haul roads ever written There has never been a text that addresses the many facets of mining haul roads on such a scope From the Foreword by Jim Humphrey Professional Engineer Autonomous haulage systems developer and Distinguished Member of the Society of Mining Metallurgy and Exploration **CIM Bulletin** Canadian Institute of Mining and Metallurgy,2000 *Mineral Property Evaluation* Richard L. Bullock,Scott Mernitz,2017-12-01 Everything sums up what must be considered for a properly documented property evaluation Less than 30% of the projects that are developed in the minerals industry yield the return on investment that was projected from the project feasibility studies The tools described in this handbook will greatly improve the probability of meeting your projections and minimizing project execution capital cost blowout that has become so prevalent in this industry in recent years Mineral Property Evaluation provides guidelines to follow in performing mineral property feasibility and evaluation studies and due diligence and in preparing proper documents for bankable presentations It highlights the need for a consistent systematic methodology in performing evaluation and feasibility work The objective of a feasibility and evaluation study should be to assess the value of the undeveloped or developed mineral property and to convey these findings to the company that is considering applying technical and physical changes to bring the property into production of a mineral product The analysis needs to determine the net present worth returned to the company for investing in these changes and to reach that decision point as early as possible and with the least amount of money spent on the evaluation study All resources are not reserves nor are all minerals an ore The successful conclusion of any property evaluation depends on the development work and conclusions of the project team The handbook has a diverse audience Professionals in the minerals industry that perform mineral property evaluations Companies that have mineral properties and perform mineral property feasibility studies and evaluations or are buying properties based on property evaluation Financial institutions both domestic and overseas that finance or raise capital for the minerals industry Consulting firms and architectural and engineering contractors that utilize mineral property feasibility studies and need

standards to follow And probably the most important the mining and geological engineering students and geology and economic geology students that need to learn the standards that they should follow throughout their careers
