Test Theory for A New Generation of Tests Norman Frederiksen, Robert J. Mislevy, Isaac I. Bejar, 2012-11-12 The editors of this volume suggest that there are missing elements in the conceptualization upon which standard test theory is based Those elements are models for just how people know what they know and do what they can do and the ways in which they increase these capacities Different models are useful for different purposes therefore broader or alternative student models may be appropriate The chapters in this volume consider a variety of directions in which standard test theory might be extended Topics covered include the role of test theory in light of recent work in cognitive and educational psychology test design student modeling test analysis and the integration of assessment and instruction

Advances in Educational and Psychological Testing: Theory and Applications Ronald K. Hambleton, Jac. N. Zaal, 2013-12-01 Over the last 20 years there have been a large number of technical advances and changes in the field of educational and psychological testing According to Anne Anastasi The decade of the 1980 s has been a period of unusual advances in psychological testing Technological progress theoretical sophistication and increasing professional responsibility are all evident in the fast moving events in this field A Anastasi Psychological Testing Sixth Edition New York Macmillan 1988 On the psychometric front advances in topics such as item response theory criterion referenced measurement generalizability theory analysis of covariance structures and validity generalization are reshaping the ways that ability and achievement tests are constructed and evaluated and that test scores are interpreted But psychometric advances as substantial and important as they have been are only a fraction of the major changes in the field of testing Today for example the computer is radically changing the ways in which tests are constructed administered and scored Computers are being used to administer tests adaptively That is the sequence of questions an examinee is administered depends upon his or her performance on earlier administered items in the test Tests are adapted to the ability levels of the examinees who are being assessed One result is shorter tests with little or no loss in

measurement precision Computers are also being used to store or bank test items Later items of interest can be selected and the computer is used to print copies of the test

Assessment of Authentic Performance in School Mathematics Richard A. Lesh, Susan J. Lamon, 2013-04-03 This book is the result of a conference sponsored by the Educational Testing Service and the University of Wisconsin's National Center for Research in Mathematical Sciences Education The purpose of the conference was to facilitate the work of a group of scholars whose interests included the assessment of higher order understandings and processes in foundation level pre high school mathematics Discussions focused on such issues as the purposes of assessment guidelines for producing and scoring real life assessment activities and the meanings of such terms as deeper and higher order understanding cognitive objectives and authentic mathematical activities Assessment was viewed as a critical component of complex dynamic and continually adapting educational systems During the time that the chapters in this book were being written sweeping changes in mathematics education were being initiated in response to powerful recent advances in technology cognitive psychology and mathematics as well as to numerous public demands for educational reform These changes have already resulted in significant reappraisals of what it means to understand mathematics of the nature of mathematics teaching and learning and of the real life situations in which mathematics is useful The challenge was to pursue assessment related initiatives that are systematically valid in the sense that they work to complement and enhance other improvements in the educational system rather than act as an impediment to badly needed curriculum reforms To address these issues most chapters in this book focus on clarifying and articulating the goals of assessment and instruction and they stress the content of assessment above its mode of delivery Computer or portfolio based assessments are interpreted as means to ends not as ends in themselves Assessment is conceived as an ongoing documentation process seamless with instruction whose quality hinges upon its ability to provide complete and appropriate information as needed to inform priorities in instructional decision making This book tackles some of the most complicated issues related to assessment and it offers fresh perspectives from leaders in the field with the hope that the ultimate consumer in the instruction assessment enterprise the individual student will reclaim his or her potential for self directed mathematics learning

Advances in Computer-Based Human Assessment P.L. Dann, S.H. Irvine, J.M. Collis, 2012-12-06 *Innovative Psychometric Modeling and Methods* Hong Jiao, Robert W. Lissitz, 2020-09-01 The general theme of this book is to present innovative psychometric modeling and methods In particular this book includes research and successful examples of modeling techniques for new data sources from digital assessments such as eye tracking data hint uses and process data from game based assessments In addition innovative psychometric modeling approaches such as graphical models item tree models network analysis and cognitive diagnostic models are included Chapters 1 2 4 and 6 are about psychometric models and methods for learning analytics The first two chapters focus on advanced cognitive diagnostic models for tracking learning and the improvement of attribute classification accuracy Chapter 4 demonstrates the use of network analysis for

learning analytics Chapter 6 introduces the conjunctive root causes model for the understanding of prerequisite skills in learning Chapters 3 5 8 9 are about innovative psychometric techniques to model process data Specifically Chapters 3 and 5 illustrate the usage of generalized linear mixed effect models and item tree models to analyze eye tracking data Chapter 8 discusses the modeling approach of hint uses and response accuracy in learning environment Chapter 9 demonstrates the identification of observable outcomes in the game based assessments Chapters 7 and 10 introduce innovative latent variable modeling approaches including the graphical and generalized linear model approach and the dynamic modeling approach In summary the book includes theoretical methodological and applied research and practices that serve as the foundation for future development These chapters provide illustrations of efforts to model and analyze multiple data sources from digital assessments When computer based assessments are emerging and evolving it is important that researchers can expand and improve the methods for modeling and analyzing new data sources This book provides a useful resource to researchers who are interested in the development of psychometric methods to solve issues in this digital assessment age

Computer-Based Testing Craig N. Mills, Maria T. Potenza, John J. Fremer, William C. Ward, 2005-04-11 Although computer based tests CBT have been administered for many years improvements in the speed and power of computers coupled with reductions in their cost have made large scale computer delivery of tests increasingly feasible CBT is now a common form of test delivery for licensure certification and admissions tests Many large scale high stakes testing programs have introduced CBT either as an option or as the sole means of test delivery Although this movement to CBT has to a great extent been successful it has not been without problems Advances in psychometrics are required to ensure that those who rely on test results can have at least the same confidence in CBTs as they have in traditional forms of assessment This volume stems from an ETS sponsored colloquium in which more than 200 measurement professionals from eight countries and 29 states convened to assess the current and future status of CBT The formal agenda for the colloquium was divided into three major segments Test Models Test Administration and Test Analysis and Scoring Each segment consisted of several presentations followed by comments from noted psychometricians and a break out session in which presenters and discussants identified important issues and established priorities for a CBT research agenda This volume contains the papers presented at the colloquium the discussant remarks based on those papers and the research agenda that was generated from the break out sessions Computer Based Testing Building the Foundation for Future Assessments is must reading for professionals scholars and advanced students working in the testing field as well as people in the information technology field who have an interest in testing *Handbook of Item Response Theory* Wim J. van der Linden, 2018-02-19 Drawing on the work of 75 internationally acclaimed experts in the field Handbook of Item Response Theory Three Volume Set presents all major item response models classical and modern statistical tools used in item response theory IRT and major areas of applications of IRT in educational and psychological testing medical diagnosis of patient reported outcomes and marketing

research It also covers CRAN packages WinBUGS Bilog MG Multilog Parscale IRTPRO Mplus GLLAMM Latent Gold and numerous other software tools A full update of editor Wim J van der Linden and Ronald K Hambleton s classic Handbook of Modern Item Response Theory this handbook has been expanded from 28 chapters to 85 chapters in three volumes The three volumes are thoroughly edited and cross referenced with uniform notation format and pedagogical principles across all chapters Each chapter is self contained and deals with the latest developments in IRT Validation of Score Meaning for the Next Generation of Assessments Kadriye Ercikan,James W. Pellegrino,2017-03-27 Despite developments in research and practice on using examinee response process data in assessment design the use of such data in test validation is rare Validation of Score Meaning in the Next Generation of Assessments Using Response Processes highlights the importance of validity evidence based on response processes and provides guidance to measurement researchers and practitioners in creating and using such evidence as a regular part of the assessment validation process Response processes refer to approaches and behaviors of examinees when they interpret assessment situations and formulate and generate solutions as revealed through verbalizations eye movements response times or computer clicks Such response process data can provide information about the extent to which items and tasks engage examinees in the intended ways With contributions from the top researchers in the field of assessment this volume includes chapters that focus on methodological issues and on applications across multiple contexts of assessment interpretation and use In Part I of this book contributors discuss the framing of validity as an evidence based argument for the interpretation of the meaning of test scores the specifics of different methods of response process data collection and analysis and the use of response process data relative to issues of validation as highlighted in the joint standards on testing In Part II chapter authors offer examples that illustrate the use of response process data in assessment validation These cases are provided specifically to address issues related to the analysis and interpretation of performance on assessments of complex cognition assessments designed to inform classroom learning and instruction and assessments intended for students with varying cultural and linguistic backgrounds The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license Learning Disabilities H. Lee Swanson,Barbara K. Keogh,2012-11-12 This volume has been developed as a direct result of a conference sponsored by the International Academy for Research in Learning Disabilities held at the University of California at Los Angeles The text provides a review and critique of current research in the areas of intelligence social cognition achievement and subtyping as they relate to learning disabilities In addition the concept that social behavior is an aspect of intelligence and the relationship between language and reading are discussed in detail by noted experts
