been mathematically modelled on the basis of the gathered flight test data Nine observations have been proposed These mainly cover the effects of centre of gravity and aircraft mass variations on spin characteristic behaviour They have all been proven as true through the results of this thesis The final observation concerns the generalisation of the Fuji results to the spin behaviour of other aircraft in the same category These observations can be used to improve flight test programmes aircraft design processes flight training materials and hence contribute strongly to better flight safety Psychological Testing in Everyday Life Karen B.
