Abstract

On-site drug tests are becoming increasingly more popular because of their easy test protocols and instantaneous results. This study evaluates the performance of four on-site drug testing devices that use competitive binding immunoassays to qualitatively determine the presence of drugs in urine: Triage[®] Panel for Drugs of Abuse plus TCA, QuickScreen[™] Pro-Multi Drug Screening Tests, Syva[®] Rapid Test d.a.u.[™] 5 and d.a.u.[™] 2, and Rapid Drug Screen[™]. All devices simultaneously determine the presence of the following drugs of abuse: amphetamine (AMP), benzoyllecgonine (BE), 11-nor-9-carboxy- Δ^9 -tetrahydrocannabinol (THCA), opiates (OPI), and phencyclidine (PCP). Triage and Rapid Drug Screen also simultaneously test for benzodiazepines (BNZ) and barbiturates (BRB), whereas QuickScreen and Rapid Test require separate devices for the BNZ and BRB analyses. Urine specimens (222) containing drug concentrations around or above cutoff values were screened by ONLINE or EMIT II immunoassays. Of these, 199 yielded positive gas chromatography-mass spectrometry results with at least 17 positive specimens in each drug class. Specimens with the target drugs added at 16.7% above and below the cutoff, 33.3% above and below the cutoff, and 66.7% above the cutoff were also used to evaluate the test devices. Sensitivity and specificity calculations demonstrated that Triage performed most predictably in the donor urine specimens and the drug-added specimens. In addition, it required the least amount of test volume and was the only device in which the appearance of a colored line indicated a positive result. Therefore, of the devices studied, Triage was the most dependable and reproducible on-site drug-screening device.

Introduction

The Department of Health and Human Services reports that 11% of the population over the age of 12 (~24 million people) voluntarily admitted to using illicit drugs in 1996, with 6.4% of the population having used an illicit drug within one month (1). Because of such prevalence, emergency rooms, rehabilitation facilities, probation officers, drug counselors, and employers

screen for illicit drug usage. Primarily, drug screening eliminates the specimens/individuals who tested negative for certain drugs such that the more complex and time-consuming confirmation process is not overburdened. However, in the emergency room, screening also serves to identify drugs so that a patient will receive the appropriate treatment. Drug rehabilitation programs and justice departments use on-site screening devices to immediately verify compliance, and employers randomly screen employees to curtail absenteeism and workplace accidents. Therefore, on-site urine drug-screening devices need to be reliable and rapid. They must also be cost effective and simple to use because testing may be performed outside the laboratory by individuals with little training. On-site drug-screening devices attempt to fulfill these requirements.

The purpose of this study was to evaluate the ability of four on-site drug-screening devices to detect the presence of amphetamine (AMP), benzoyllecgonine (BE), 11-nor-9-carboxy- Δ^9 -tetrahydrocannabinol (THCA), opiates (OPI), phencyclidine (PCP), benzodiazepines (BNZ), and barbiturates (BRB) in urine: Triage Panel for Drugs of Abuse plus TCA, QuickScreen Pro-Multi Drug Screening Tests, Syva Rapid Test d.a.u. 5 and d.a.u. 2, and Rapid Drug Screen. All devices simultaneously determined the presence of five drugs of abuse: AMP, BE, THCA, OPI, and PCP. Triage and Rapid Drug Screen also simultaneously detected the presence of BNZ and BRB. QuickScreen and Rapid Test required separate test cards for BNZs and BRBs. Triage can also determine the presence of tricyclic antidepressants (TCA). However, TCAs were not analyzed in this study (2). All screening results were confirmed by gas chromatography in tandem with mass spectrometry (GC-MS).

Materials and Methods

Materials

Screening assays: Triage Panel for Drugs of Abuse plus TCA from Biosite Diagnostics (San Diego, CA), QuickScreen Pro-Multi Drug Screening Tests from Pharmatech (San Diego, CA), Syva Rapid Test d.a.u. 5 and d.a.u. 2 from Behring Diagnostics, Inc. (Cupertino, CA), and Rapid Drug Screen from American Bio Medica (San Diego, CA) were acquired. All devices utilized a competitive binding immunoassay to detect the presence of drugs in urine.

Testing And Evaluation Of Drugs Of Abuse:

Testing and Evaluation of Drugs of Abuse Martin W. Adler, Alan Cowan, 1990-05-29 This work describes how critical biological information on today's abused drugs is obtained in both laboratory and clinical settings. Recent methodological advances, both great and small, are presented in a concise manner by experienced researchers and scholars. The text covers wholesale innovations in methodology in addition to simple modifications of existing methods that often yield great advances, and the strengths and weaknesses of all methods are assessed. The survey is comprehensive and uncovers key characteristics of abused drugs at the receptor level on animal behavior and in humans. [The SAGE Handbook of Drug & Alcohol Studies](#)

Kim Wolff, Jason White, Steven Karch, 2016-10-18 With contributions from leading international academics across the biological sciences, this handbook takes a critical look at the key contemporary issues and debates in the field. The 31 chapters are divided into four parts: Part I Determination of Substance Misuse; Part II PK and PD in Relation to Patterns of Use; Part III Detection and Treatment of Drug and Alcohol Use; Part IV Controversies and New Approaches. This Handbook is an excellent reference text for the growing number of academics, students, scientists, and practitioners in the drug and alcohol studies community and will be a vital resource to the allied professions involved in workplace drug testing, clinical toxicology, and forensic science.

Assessment in Counseling Danica G. Hays, 2023-07-28 This best-selling text explains the basic principles of psychological assessment and measurement and guides students and practitioners in the appropriate selection, interpretation, and communication of test results. Danica Hays introduces more than 150 assessment instruments used to evaluate mental health, intelligence, career development, wellness, personality, and interpersonal relationships. This latest edition covers new or expanded content on assessment use in schools, colleges, universities, and telehealth platforms; interprofessional collaboration to support assessment practices and procedures; qualitative assessment approaches and how they can be infused throughout counseling and assessment; cultural and social justice considerations and practices; and crisis and trauma assessment. Numerous in-text features facilitate teaching and learning, including chapter pretests, trainee-centered reflective and field activities, practitioner perspectives, tip sheets on major concepts and practices, sample assessment items and tools, and case examples. A supplemental Instructor's Guide is available by request that consists of a test bank, PowerPoint slides, and a sample syllabus.
