Evolution: the Grand Experiment Dr. Carl Werner, Carl Werner, 2007 Darwin's book on evolution admitted that intermediate links were perhaps the most obvious and serious objection to the theory of evolution Darwin recognized that the fossils collected by scientists prior to 1859 did not correspond with his theory of evolution but he predicted that his theory would be confirmed as more and more fossils were found One hundred and fifty years later *Evolution The Grand Experiment* critically examines the viability of Darwin's theory

Evolution and Palaeobiology of Pterosaurs Eric Buffetaut, Jean-Michel Mazin, 2003 Pterosaurs were a peculiar group of Mesozoic vertebrates which acquired the ability to fly in an original way using a membrane attached to a single finger of the hand Ever since the first description of a pterosaur skeleton in 1784 these remarkable animals have elicited much discussion and controversy among palaeontologists and many basic questions about their origin evolution and biology remain disputed In the last few years interest in pterosaurs has been revived by numerous discoveries of new and sometimes remarkably preserved specimens which have enlarged and changed our picture of this group The volume begins with descriptions of several new pterosaurs from the Triassic Jurassic and Cretaceous of Europe North and South America and Africa Following this alternative hypotheses of pterosaur phylogeny and evolution are put forward Several papers discuss the functional anatomy of pterosaurs and its implications for aerial locomotion The study of pterosaur footprints provides important new evidence concerning their terrestrial locomotion and this approach is used in several contributions A developing aspect of pterosaur research is bone histology as shown by the final papers in this collection
