The Impact Of Microelectronics A Tentative Appraisal Of Information Technology:

The Social and Economic Impact of New Technology 1978-84: A Select Bibliography Leslie Grayson, 2012-12-06
Silicon chip technology microprocessor technology information technology or quite simply new technology These are some of the names representing the microelectronics revolution depending upon the audience being addressed by speaker or writer No previous new industrial development has caused such widespread publicity and discussion amongst users and researchers as the new technology Concern is being expressed about the effects of new technology on employment job satisfaction social life leisure activities and the economics of commerce and industry The late 70s saw many doom laden predictions of those effects but by 1983 both management and trade unions were taking a more objective view of the social and economic impacts and many correspondents now see the new technology as a means of opening up new industries and overcoming the effects of world recessions The chip has involved the factory floor the office the supermarket and the home Electronic funds transfer electronic shopping microelectronic domestic appliances word processors and microprocessor controlled machinery mean that the new technology has pervaded all aspects of social and economic life and the developed countries are now coming to accept it as part of society as a whole Inevitably the flood of literature on the social and economic impacts of new technology has been overwhelming Unfortunately the quality of information and arguments propagated at conferences in journal papers and research reports has indicated that there has been little quantifiable evidence available on the effects of these impacts *The Impact of micro-electronics. A tentative appraisal of information technology. [Mit Tab.] (3. impr.)* J. Rada, 1982 **Technology and Innovation in the International Economy** Charles Cooper, 1994 The two major review essays Jeffrey James on microelectronic technology and Martin Fransman on biotechnology assess the impact of these new technologies on production trade employment and welfare in developing countries **New Technology (Routledge Revivals)** Greg J. Bamber, Russell D. Lansbury, 2013-12-19 First published in 1989 this book presents a unique comparative perspective on the relationship between technological change and human resource management Following a detailed introduction chapters deal with a variety of issues including managing change industrial democracy and employee involvement gender and structural change International and well renowned authors provide an authoritative analysis which will be of particular interest to students of Business and Management organisational and technological change Economics and Sociology **The Information Society** Armand Mattelart, 2003-04-03 The impact of the information society are multiform and transdisciplinary There are few areas of social political and economic life that have not been affected or challenged by the new technologies of information and communication In this short introduction Armand Mattelart unpacks the notion of the information society and examines why it has become the dominant paradigm for social change in the 21st Century Critically he also asks why the notion has come to dominant in the absence of any critical examination of the conditions under which it has been produced Combining a long term historical and geopolitical

perspective Mattelart questions the axioms used to legitimate the Information Society and critically assesses the ways in which it has been conceptualised as a theoretical concept as well as policy making tool This introduction will be of interest to all students of media and communication as well as social scientists in general **Labour Information** International Labour Office,1991 This reference book provides a core list of publications in the labour field covering both reference materials and selected ILO publications in English It covers employment training labour relations labour administration working conditions and environment social security promotion of equality and workers education **The Shaping of Automation** Dirk de Wit,1994 Hi-Tech for Industrial Development Jose E. Cassiolato,Hubert Schmitz,2002-01-31 Based on original research this book focuses on the importance of the producer user connection the changing balance between national and foreign firms and the need for learning in industry and government **The Cybernetics Moment** Ronald R. Kline,2015-07-15 How did cybernetics and information theory arise and how did they come to dominate fields as diverse as engineering biology and the social sciences Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Outstanding Academic Title Choice Cybernetics the science of communication and control as it applies to machines and to humans originates from efforts during World War II to build automatic antiaircraft systems Following the war this science extended beyond military needs to examine all systems that rely on information and feedback from the level of the cell to that of society In The Cybernetics Moment Ronald R Kline a senior historian of technology examines the intellectual and cultural history of cybernetics and information theory whose language of information feedback and control transformed the idiom of the sciences hastened the development of information technologies and laid the conceptual foundation for what we now call the Information Age Kline argues that for about twenty years after 1950 the growth of cybernetics and information theory and ever more powerful computers produced a utopian information narrative an enthusiasm for information science that influenced natural scientists social scientists engineers humanists policymakers public intellectuals and journalists all of whom struggled to come to grips with new relationships between humans and intelligent machines Kline traces the relationship between the invention of computers and communication systems and the rise decline and transformation of cybernetics by analyzing the lives and work of such notables as Norbert Wiener Claude Shannon Warren McCulloch Margaret Mead Gregory Bateson and Herbert Simon Ultimately he reveals the crucial role played by the cybernetics moment when cybernetics and information theory were seen as universal sciences in setting the stage for our current preoccupation with information technologies Strengthening Technological Capabilities International Labour Office,1992 This book offers a review of ILO activities on technology reveals the challenges of endogenous capacity building in developing countries The book covers a range of areas including technology policy assessment evaluation of the impact of new technologies on employment working conditions and working environment
