The Incas And Other Ancient Andean Civilizations:

The Incas and Other Ancient Andean Civilizations María Longhena, Walter Alva, 2007 **Inca Rituals and Sacred Mountains** Maria Constanza Ceruti, Johan Reinhard, 2010-12-31

The Incas carried out some of the most dramatic ceremonies known to us from ancient times. Groups of people walked hundreds of miles across arid and mountainous terrain to perform them on mountains over 6 096 m 20 000 feet high. The most important offerings made during these pilgrimages involved human sacrifices capacochas. Although Spanish chroniclers wrote about these offerings and the state sponsored processions of which they were a part, their accounts were based on second hand sources and the only direct evidence we have of the capacocha sacrifices comes to us from archaeological excavations. Some of the most thoroughly documented of these were undertaken on high mountain summits where the material evidence has been exceptionally well preserved. In this study we describe the results of research undertaken on Mount Lullaillo 6 739 m 22 109 feet which has the world's highest archaeological site. The types of ruins and artifact assemblages recovered are described and analyzed. By comparing the archaeological evidence with the chroniclers' accounts and with findings from other mountaintop sites, common patterns are demonstrated while at the same time previously little known elements contribute to our understanding of key aspects of Inca religion. This study illustrates the importance of archaeological sites being placed within the broader context of physical and sacred features of the natural landscape.

Ancient Advanced Technology in South America Norah Romney, 2021-02-13

There are a host of ancient ruins in South America claimed by the Inca, inherited by the Inca, conquered by the Inca, and built by the Inca. Although one label has stuck on each monument or ancient site, it is clear there are many layers of construction, physically and conceptually. Academics and scholars still debate who built these monuments, did they inherit them? Was there a Pre Inca culture, but everyone can appreciate how advanced the Inca. Ancient Ruins found in the highlands of South America. The Inca were the largest empire ever seen in the Americas and the largest in the world at that time, yet doubt is cast on their monuments and origins. Tiahuanaco, a region of Bolivia that holds many remnants of ancient civilizations, demonstrates some of the most unique and amazingly precise examples of stonework in the world. The ancient people who created these walls and buildings used such a high degree of mathematical expertise that the workmanship is astounding even to modern day people. They marvel at how the stone cutters from long ago created all of it with simple hand tools. The high plains of Peru and Bolivia in the Andes Mountains hold a wealth of historical sites, each one more amazing than the next. Scholars and archaeologists had only seen the same type of masonry in ancient Egypt before this. Although some historians call this Inca architecture, this later time period civilization had little to do with creating these fantastic structures. The Incas dominated this area from approximately the 13th to 14th centuries AD up until the time of the Spanish explorers' conquest of the region. Indeed, they built some magnificent structures, but the ones most interesting for their precision and longevity came from even older groups. Some of these empires were called the Wari and the Tiahuanaco. They existed hundreds or even thousands of

years before the Inca came to power Multiple historians who specialize in architectural studies have dedicated a lot of their time and knowledge to figuring out how ancient groups of people who did not use advanced tools or even the wheel could create such structures The most advanced chisels and hammers of the time would have been created from copper stone and wood With these simple hand tools people dug granite andesite and porphyry out of quarries After transporting them to the final locations they then carved them with smooth precision so they would fit together almost seamlessly What techniques could these ancient experts use to make such flat and smooth surfaces exact angles and joints that would not allow a single blade of grass to squeeze between Historians can only guess about some of the methods that allowed for such unique stone cutting and building styles

Scale and the Incas Andrew James Hamilton, 2018-06-05 A groundbreaking work on how the topic of scale provides an entirely new understanding of Inca material culture Although questions of form and style are fundamental to art history the issue of scale has been surprisingly neglected Yet scale and scaled relationships are essential to the visual cultures of many societies from around the world especially in the Andes In *Scale and the Incas* Andrew Hamilton presents a groundbreaking theoretical framework for analyzing scale and then applies this approach to Inca art architecture and belief systems The Incas were one of humanity's great civilizations but their lack of a written language has prevented widespread appreciation of their sophisticated intellectual tradition Expansive in scope this book examines many famous works of Inca art including Machu Picchu and the Dumbarton Oaks tunic more enigmatic artifacts like the Sayhuite Stone and Capacocha offerings and a range of relatively unknown objects in diverse media including fiber wood feathers stone and metalwork Ultimately Hamilton demonstrates how the Incas used scale as an effective mode of expression in their vast multilingual and multiethnic empire Lavishly illustrated with stunning color plates created by the author the book's pages depict artifacts alongside scale markers and silhouettes of hands and bodies allowing readers to gauge scale in multiple ways The pioneering visual and theoretical arguments of *Scale and the Incas* not only rewrite understandings of Inca art but also provide a benchmark for future studies of scale in art from other cultures
