

Addiction

- Reward is an incomplete explanation of addiction.
 - Over time, dopamine release to a rewarding stimulus ceases; it returns if an expected reward is omitted.
 - Researchers suggest that dopamine signals reward *and* errors in prediction.
 - Detecting errors in prediction is critical to learning.
 - Errors in prediction that learning theorists consider important:
 - The reward is unexpected or better than expected.
 - The reward is omitted or is worse than expected.

Wittgenstein: Understanding and Meaning Gordon P. Baker, P. M. S. Hacker, 2008-04-15 This is a new edition of the first volume of G P Baker and P M S Hacker's definitive reference work on Wittgenstein's *Philosophical Investigations*. New edition of the first volume of the monumental four volume *Analytical Commentary on the Philosophical Investigations*. Takes into account much material that was unavailable when the first edition was written. Following Baker's death in 2002 P M S Hacker has thoroughly revised the first volume rewriting many essays and sections of exegesis completely. Part One the Essays now includes two completely new essays *Meaning and Use* and *The Recantation of a Metaphysician*. Part Two Exegesis 1-184 has been thoroughly revised in the light of the electronic publication of Wittgenstein's Nachlass and includes many new interpretations of the remarks, a history of the composition of the book and an overview of its structure. The revisions will ensure that this remains the definitive reference work on Wittgenstein's masterpiece for the foreseeable future.

Scientific Explanation Philip Kitcher, Wesley C. Salmon, 1962-05-25 *Scientific Explanation* was first published in 1962. Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions. Is a new consensus emerging in the philosophy of science? The nine distinguished contributors to this volume apply that question to the realm of scientific explanation and although their conclusions vary they agree in one respect: there definitely was an old consensus. Co-editor Wesley Salmon's opening essay *Four Decades of Scientific Explanation* grounds the entire discussion. His point of departure is the founding document of the old consensus: a 1948 paper by Carl G. Hempel and Paul Oppenheim, *Studies in the Logic of Explanation*, that set forth with remarkable clarity a mode of argument that came to be known as the deductive-nomological model. This approach, holding that explanation does not move beyond the sphere of empirical knowledge, remained dominant during the hegemony of logical empiricism from 1950 to 1975. Salmon traces in detail the rise and breakup of the old consensus and examines the degree to which there is, if not a new consensus, at least a kind of reconciliation on this issue among contemporary philosophers of science and clear agreement that science can indeed tell us why. The other contributors, in the order of their presentations, are Peter Railton, Matti Sintonen, Paul W. Humphreys, David Papineau, Nancy Cartwright, James Woodward, Merrilee H. Salmon, and Philip Kitcher.

The Concept of a Philosophical Jurisprudence Michael Oakeshott, 2011-10-26 This volume brings together for the first time over a hundred of Oakeshott's essays and reviews written between 1926 and 1951 that until now have remained scattered through a variety of scholarly journals, periodicals, and newspapers. A new editorial introduction explains how these pieces, including the lengthy essay on the philosophical nature of jurisprudence that occupies an important position in Oakeshott's work, illuminate his other published writings. The collection throws new light on the context of his thought by placing him in dialogue with a number of other major figures in the humanities and social sciences during this period, including Leo Strauss, A. N. Whitehead, Karl Mannheim, Herbert Butterfield, E. H. Carr, Gilbert Ryle,

Explanation, Causation and Deduction Fred Wilson,2012-12-06 The purpose of this essay is to defend the deductive nomological model of explanation against a number of criticisms that have been made of it It has traditionally been thought that scientific explanations were causal and that scientific explanations involved deduction from laws In recent years however this three fold identity has been challenged there are it is argued causal explanations that are not scientific scientific explanations that are not deductive deductions from laws that are neither causal explanations nor scientific explanations and causal explanations that involve no deductions from laws The aim of the present essay is to defend the traditional identities and to show that the more recent attempts at invalidating them fail in their object More specifically this essay argues that a Humean version of the deductive nomological model of explanation can be defended as 1 the correct account of scientific explanation of individual facts and processes and as 2 the correct account of causal explanations of individual facts and processes The deductive nomological model holds that to explain an event E say that a is G one must find some initial conditions C say that a is F and a law or theory T such that T and C jointly entail E and both are essential to the deduction *Treatise on Basic Philosophy: Volume 6* Mario BUNGE,1983-08-31 **The Anatomy of Inquiry (Routledge Revivals)** Israel Scheffler,2014-02-04 First published in 1963 this title considers the philosophical problems encountered when attempting to provide a clear and general explanation of scientific principles and the basic confrontation between such principles and experience Beginning with a detailed introduction that considers various approaches to the philosophy and theory of science Israel Scheffler then divides his study into three key sections Explanation Significance and Confirmation that explore how these complex issues involved have been dealt with in contemporary research This title by one of America s leading philosophers will provide a valuable analysis of the theory and problems surrounding the Philosophy of Science
