Eco- and Ground Bio-Engineering: The Use of Vegetation to Improve Slope Stability A. Stokes,Ioannis Spanos,Joanne E. Norris,Erik Cammeraat,2007-04-10 This volume brings together papers from geotechnical and civil engineers biologists ecologists and foresters They discuss current problems in slope stability research and how to address them using ground bio and eco engineering techniques Coverage

presents studies by scientists and practitioners on slope instability erosion soil hydrology mountain ecology land use and restoration and how to mitigate these problems using vegetation

Ground and Water Bioengineering for Erosion

Control and Slope Stabilization David H. Barker, 2004 The need for effective measures to protect soil and water resources has risen dramatically This volume focuses on bioengineering technology that utilizes vegetative and vegetative structural solutions to prevent erosion and stabilize sites disturbed by infrastructure and development

Landslides: Theory, Practice and Modelling S.P. Pradhan, V. Vishal, T.N. Singh, 2018-06-28 This book with contributions from international landslide experts presents in depth knowledge of theories practices and modern numerical techniques for landslide analysis Landslides are a reoccurring problem across the world and need to be properly studied for their mitigation and control Due to increased natural and anthropogenic activities chances of landslide occurrence and associated hazards have increased The book focuses on landslide dynamics mechanisms and processes along with hazard mitigation using geo engineering structural geophysical and numerical tools The book contains a wealth of the latest information on all aspects of theory practices and modelling tools and techniques involved in prediction prevention monitoring mitigation and risk analysis of landslide hazards This book will bring the reader up to date on the latest trends in landslide studies and will help planners engineers scientists and researchers working on landslide engineering

River Restoration

Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia
