What Solution Can Help You Meet Compliance?

Within the biotech industry, there are many start-ups and smaller companies that lack the funding for compliance departments or dedicated personnel. The Compliance Builder makes data management more practical by allowing you to control signature and electronic document compliance across all IT systems.

Are You Ready for Your Quality to Go to the Next Level?

The biotech industry is heavily regulated, and appropriate document control is essential. The old ways of using notebooks and filing cabinets are no longer effective. There are emerging technologies that are affordable, scalable, and reduce the need for dedicated quality personnel or departments. Xybion provides a real-time compliance monitoring software specifically designed to help companies pass audits and achieve 21 CFR Part 11 compliance.

Advanced Technologies for the Quality Control and Standardization of Plant Based Medicines Jiang Xu,Caroline Howard,2020-06-18 Herbs and herbal products are of paramount importance for human health To be able to guarantee safety and quality standards and testing methods are needed Pharmacopoeias contain quality control protocols

setting the standards which are then required by governments. The quality traits are many including the intrinsic variables of medicinal plants e.g. the levels of the active compounds and the absence of possibly naturally occurring toxic compounds. On the other hand many quality traits are related to agricultural conditions and practices or to the harvesting and post harvest processing. With so many variables quality control of the end product becomes extremely complex, time consuming and costly. To ensure the quality of medicinal plants for human consumption, quality management, the use of good practices at each step from seed to final product becomes a crucial aspect. In general, quality control includes the inspection of the product's identity, purity and content based on its physical, chemical or biological properties. To ensure the quality of herbal medications, criteria such as botanical quality, type of preparation, physical constants, adulteration, contaminants, chemical constituents, pesticides, residues etc. should be examined. Meanwhile, authentication of herbs is needed to avoid possible adulteration or contaminating plants, even toxic herbs such as *Aristolochia* species. Many of the methods are long standing such as microscopy in combination with color reactions, but some 50 years ago chromatography developed as a major tool for both qualitative and quantitative analysis of herbal preparations. Nowadays research is working on the improvement of these methods and on the development of novel tools. For instance, next generation sequencing and mass spectrometry imaging are emerging as new technologies for the quality control of herbal medicines. With these technologies, quick testing of herbal products and of mixed herbal powder preparations, including the testing for specific plant parts, botanical drugs can be achieved. Also, novel chemical tools such as metabolomics and Near Infrared Red (NIR) spectroscopy are being developed as powerful tools to identify and to link these with activity by using chemometric tools such as multivariate analysis. Finally, progress of informatic tools such as machine learning helps to deal with the big data generated by sequencing or mass spectrometry. However, these new technologies like all other new born technologies should be tested and perfected for a broad range of products.
