Constructive Quantum Field Theory II G. Velo, A.S. Wightman, 2012-12-06 The seventh Ettore Majorana International School of Mathematical Physics was held at the Centro della Cultura Scientifica Erice Sicily 15 July 1988 The present volume collects lecture notes on the session which was entitled Constructive Quantum Field Theory II The II refers to the fact that the first such school in 1973 was devoted to the same subject The school was a NATO Advanced Study Institute sponsored by the Italian Ministry of Scientific and Technological Research and the Regional Sicilian Government At the time of the 1973 Erice School on Constructive Field Theory the speakers could summarize a decade of effort on the solution of superrenormalizable models in two dimensional space time leading to the verification of the axioms of relativistic quantum field theory for these examples The resulting lecture notes have proved to be exceptionally useful and are still in print In the decade and a half that have lapsed since that time there has been much hard work with the ultimate objective of providing a rigorous mathematical foundation for the quantum field theories in four dimensional space time that summarize a large fraction of our current understanding of elementary particle physics QCD and the electroweak theory The lecture notes of the 1988 school record the fact that although this objective has not been reached Important progress has been made The ultraviolet stability of Yang Mills theory in four dimensions has been treated and renormalizable not superrenormalizable models in two dimensional space time Gross Neveu models have been solved

Quantum Field Theory and Gravity Felix Finster, Olaf Müller, Marc Nardmann, Jürgen Tolksdorf, Eberhard Zeidler, 2012-02-08 One of the most challenging problems of contemporary theoretical physics is the mathematically rigorous construction of a theory which describes gravitation and the other fundamental physical interactions within a common framework The physical ideas which grew from attempts to develop such a theory require highly advanced mathematical methods and radically new physical concepts This book presents different approaches to a rigorous unified description of quantum fields and gravity It contains a carefully selected cross section of lively discussions which took place in autumn 2010 at the fifth conference Quantum field theory and gravity Conceptual and mathematical advances in the search for a unified framework in Regensburg Germany In the tradition of the other proceedings covering this series of conferences a special feature of this book is the exposition of a wide variety of approaches with the intention to facilitate a comparison The book is mainly addressed to mathematicians and physicists who are interested in fundamental questions of mathematical physics It allows the reader to obtain a broad and up to date overview of a fascinating active research area

Proceedings of the 7th International Symposium on Foundations of Quantum

Mechanics in the Light of New Technology Yoshimasa A. Ono, 2002 This book discusses fundamental problems in quantum physics with emphasis on quantum coherence and decoherence Papers covering the wide range of quantum physics are included atom optics quantum optics quantum computing quantum information cryptography macroscopic quantum phenomena mesoscopic physics physics of precise measurements and fundamental problems in quantum physics The book will serve not only as a good introduction to quantum coherence and decoherence for newcomers in this field but also as a reference for experts
