Smooth Boundaries:

Closed Object Boundaries from Scattered Points Remco Veltkamp, 1994-11-30 This monograph is devoted to computational morphology particularly to the construction of a two dimensional or a three dimensional closed object boundary through a set of points in arbitrary position By applying techniques from computational geometry and CAGD new results are developed in four stages of the construction process a the gamma neighborhood graph for describing the structure of a set of points b an algorithm for constructing a polygonal or polyhedral boundary based on a c the flintstone scheme as a hierarchy for polygonal and polyhedral approximation and localization d and a Bezier triangle based scheme for the construction of a smooth piecewise cubic boundary

Elements of the geometry and topology of minimal surfaces in three-dimensional space A. T. Fomenko, A. A. Tuzhilin, 2005 This book grew out of lectures presented to students of mathematics physics and mechanics by A T Fomenko at Moscow University under the auspices of the Moscow Mathematical Society The book describes modern and visual aspects of the theory of minimal two dimensional surfaces in three dimensional space The main topics covered are topological properties of minimal surfaces stable and unstable minimal films classical examples the Morse Smale index of minimal two surfaces in Euclidean space and minimal films in Lobachevskian space Requiring only a standard first year calculus and elementary notions of geometry this book brings the reader rapidly into this fascinating branch of modern geometry

Handbook of Complex Analysis Steven G. Krantz, 2022-03-07 In spite of being nearly 500 years old the subject of complex analysis is still today a vital and active part of mathematics There are important applications in physics engineering and other aspects of technology This Handbook presents contributed chapters by prominent mathematicians including the new generation of researchers More than a compilation of recent results this book offers students an essential stepping stone to gain an entry into the research life of complex analysis Classes and seminars play a role in this process More though is needed for further study This Handbook will play that role This book is also a reference and a source of inspiration for more seasoned mathematicians both specialists in complex analysis and others who want to acquaint themselves with current modes of thought The chapters in this volume are authored by leading experts and gifted expositors They are carefully crafted presentations of diverse aspects of the field formulated for a broad and diverse audience This volume is a touchstone for current ideas in the broadly construed subject area of complex analysis It should enrich the literature and point in some new directions

Quadrature Domains Makoto Sakai, 2006-11-17

Hydraulic Loss Coefficients for Culverts Blake P. Tullis, 2012 Research in the area of culvert hydraulics has centered on concrete box culverts and circular corrugated metal pipe culverts The hydraulic analyses of these culvert types have been well defined for conventional installations but not for environmentally sensitive and nontraditional culverts It is desirable to design and construct some culvert crossings to minimize their impact on the natural environment Culverts are now being designed to maintain natural velocities and minimize turbulence to allow migratory species to pass through the culvert barrel

Such designs may add baffles on the invert bury the culvert invert or use bottomless culverts to provide for a natural stream invert Other designs use larger and wider culverts to reduce the amount of contraction and acceleration

Global Lorentzian Geometry John K. Beem,Paul Ehrlich,Kevin Easley,2017-09-29 Bridging the gap between modern differential geometry and the mathematical physics of general relativity this text in its second edition includes new and expanded material on topics such as the instability of both geodesic completeness and geodesic incompleteness for general space times geodesic connectivity the generic condition the sectional curvature function in a neighbourhood of degenerate two plane and proof of the Lorentzian Splitting Theorem Five or more copies may be ordered by college or university stores at a special student price available on request

Image Analysis of Food Microstructure John C. Russ,2004-11-15 Image Analysis of Food Microstructure offers a condensed guide to the most common procedures and techniques by which quantitative microstructural information about food can be obtained from images The images are selected from a broad range of food items including macroscopic images of meat and finished products such as pizza and the microstructu

Quantum Field Theory I: Basics in Mathematics and Physics Eberhard Zeidler,2007-04-18 This is the first volume of a modern introduction to quantum field theory which addresses both mathematicians and physicists at levels ranging from advanced undergraduate students to professional scientists The book bridges the acknowledged gap between the different languages used by mathematicians and physicists For students of mathematics the author shows that detailed knowledge of the physical background helps to motivate the mathematical subjects and to discover interesting interrelationships between quite different mathematical topics For students of physics fairly advanced mathematics is presented which goes beyond the usual curriculum in physics

Boundaries of a Complex World Andrei Ludu,2022-09-24 The 2nd edition of this book provides novel topics and studies in boundaries of networks and Big Data Systems The central theme of this book is the extent to which the structure of the free dynamical boundaries of a system controls the evolution of the system as a whole Applying three orthogonal types of thinking mathematical constructivist and morphological it illustrates these concepts using applications to selected problems from the social and life sciences as well as economics In a broader context it introduces and reviews some modern mathematical approaches to the science of complex systems Standard modeling approaches based on non linear differential equations dynamic systems graph theory cellular automata stochastic processes or information theory are suitable for studying local problems However they cannot simultaneously take into account all the different facets and phenomena of a complex system and new approaches are required to solve the challenging problem of correlations between phenomena at different levels and hierarchies their self organization and memory evolutive aspects the growth of additional structures and are ultimately required to explain why and how such complex systems can display both robustness and flexibility This graduate level text addresses a broader interdisciplinary audience keeping the mathematical level essentially uniform throughout the book and involving only basic elements from calculus algebra geometry and systems

theory **Rivers and Floodplains** John S. Bridge, 2009-04-01 Rivers and Floodplains is concerned with the origin geometry water flow sediment transport erosion and deposition associated with modern alluvial rivers and floodplains how they vary in time and space and how this information is used to interpret deposits of ancient rivers and floodplains There is specific reference to the types and lifestyles of organisms associated with fluvial environments human interactions with rivers and floodplains associated environmental and engineering concerns as well as the economic aspects of fluvial deposits particularly the modeling of fluvial hydrocarbon reservoirs and aquifers Methods of studying rivers and floodplains and their deposits are also discussed Although basic principles are emphasized many examples are detailed Particular emphasis is placed on how an understanding of the nature of modern rivers and floodplains is required before any problems concerning rivers and floodplains past or present can be addressed rationally Rivers and Floodplains is designed as a core text for senior undergraduate and graduate students studying modern or ancient fluvial environments particularly in earth sciences environmental sciences and physical geography but also in civil and agricultural engineering College teachers researchers and practising professionals will also find the book an invaluable reference Presents a process based approach which is relevant to modern curricula Discusses methods of studying rivers and floodplains and their deposits Provides many detailed examples throughout the text Emphasises the basic principles of this subject As the first synthesis of this entire field it will be a must have for all students studying modern or ancient fluvial environments Teachers researchers and practising professionals will find this an invaluable reference tool Rivers and Floodplains will also be of interest to geologists geographers and engineers
