SMP 11-16 Teacher's Guide to |+ School Mathematics Project, School Mathematics Project Staff, 1994-01-01 Teachers guide for the B supplementary material in the Blue course The Sociology of Mathematics Education Paul Dowling, 2002-11-01 Until the 1960s maths was studied as an academic subject in a desire to have more mathematicians The current trend however has moved away from viewing maths as a purely intellectual endeavour and towards developing a more mathematically competent workforce and citizenry This trend has seen a large increase in the number of maths schemes being produced by the major educational publishers which attempt to make maths easier and more approachable by using language instead of symbols So why do so many children still fail at maths The author contends that to understand this teachers need to analyze and evaluate the maths textbooks they are currently using The author shows the reader how to systematically analyze and evaluate these textbooks This interrogation of classroom resources should have important implications for teaching strategies and for textbook design and use The Australian Mathematics Teacher , 1989 **SMP 11-16 Teacher's Guide to Book YX2** School Mathematics Project, 1996-03 This book is the teacher s guide for Book YX2 part of the SMP Y yellow series which is written for pupils of higher ability The British National Bibliography Arthur James Wells, 1995 **SMP 11-16** School Mathematics Project, 1994-01-01 The Teacher s Guide to Book G8 green series written for pupils of lower ability has been produced in response to the National Curriculum *Secondary Education Journal* , 1985

the items in such tests have set mathematical tasks in every day situations such as shopping This requires children to make decisions about whether to use or not their own every day knowledge and experience in their problem solving Some children are likely to have a better feel for this game than others *Assessing Children s Mathematical Knowledge* draws on the analysis of national curriculum test data from more than 600 children of 10 11 and 13 14 years of age as well as in depth interviews with 250 of these as they attempt to solve test problems in order to explore the nature of the difficulties children experience with realistic items The book shows by comparing test and interview data that many children as a consequence of their confusion over the requirements of realistic test items fail in tests to demonstrate mathematical knowledge and understanding that they actually possess The book also explores whether this problem of invalid measurement is equally spread across children from different social backgrounds and across the sexes The book will be of interest to academics and teachers studying for advanced degrees in mathematics education sociology of education and educational assessment
