The Hearts Pangaea:

Pannotia to Pangaea B. Murphy, R.A. Strachan, C. Quesada, 2021-01-28 Special Publication 503 celebrates the career of R Damian Nance. It features 27 articles with more than 110 authors based in 18 different countries. These articles include contributions on the processes responsible for the formation and breakup of supercontinents, the controversies concerning the status of Pannotia as a supercontinent, the generation and destruction of Paleozoic oceans, and the development of the Appalachian-Ouachitan-Caledonide-Variscan orogens. In addition to field work, the approaches to gain that understanding include examining the relationships between stratigraphy and structural geology, precise geochronology, geochemical and isotopic fingerprinting, geodynamic modelling, regional syntheses, palaeogeographic modelling, and good old-fashioned arm waving. The wide range of topics mirrors the breadth and depth of Damian's contributions, interests, and expertise. Like Damian's papers, the contributions range from the predominantly conceptual to detailed field work, but all are targeted at understanding important tectonic processes. Their scope not only varies in scale from global to regional to local, but also in the range of approaches required to gain that understanding.

New Forest James Barnet, 2021-02-22 This book is intended to be the most complete and up-to-date guide to the geology and fossils of the New Forest, providing a wealth of information of interest to both the amateur fossil collector and the professional geologist. It includes some 200 field photographs, palaeogeographic maps, digitised borehole outcrop logs, and geological cross sections. Also included is a tour of the regional geological evolution of southern England since the Permian Period, 280 million years ago, based on deep boreholes and coastal exposures, including the world-famous Jurassic coast of Dorset and east Devon. The author discusses the petroleum geology of southern England and the New Forest, and gives a detailed overview of the stratigraphy of the Hampshire Basin, followed by related aspects of economic geology within this area, including ironstones, freshwater aquifers, geothermal energy, sand, clay, and peat resources. Finally, there is an up-to-date and complete account of the principal fossil localities, together with a comprehensive gallery of photographs with accompanying descriptions of the most abundant fossils within the New Forest National Park.

At the Ocean's Edge Margaret Conrad, 2020-07-09 At the Ocean's Edge offers a vibrant account of Nova Scotia's colonial history, situating it in an early and dramatic chapter in the expansion of Europe. Between 1450 and 1850, various processes, sometimes violent, often judicial, rarely conclusive, transferred power first from Indigenous societies to the French and British empires, and then to European settlers and their descendants, who claimed the land as their own. This book not only brings Nova Scotia's struggles into sharp focus, but also unpacks the intellectual and social values that took root in the region. By the time that Nova Scotia became a province of the Dominion of Canada in 1867, its multicultural peoples, including Mi'kmaq, Acadian, African, and British, had come to a grudging, unequal, and often contested accommodation among themselves. Written in accessible and spirited prose, the narrative follows larger trends through the experiences of colourful individuals who grappled with expulsion, genocide, and war to establish the institutions, relationships, and values that
