Vincent,1995-10-10 Aerosols in workplace

atmospheres have been and continue to be a major focus of industrial hygiene Although there are many existing texts on aerosol science and on occupational health respectively this new book sets out to be complementary to these and to provide a link between the two fields In particular the central concept of worker exposure leads to a structured approach which draws together wide ranging aspects of aerosol science within the occupational health framework Introductory chapters are concerned with the nature and properties of aerosols and how they are generated in the occupational environment The book then goes on to provide a description of the fundamental mechanical properties of aerosols in particular those mechanical properties associated with the motion of airborne particles which govern particle transport inhalation deposition sampling

and control There follows a description of the optical properties of workplace aerosols since these are important in the visual appearance of aerosols and in many aspects of measurement The central core of the book deals with the processes which govern the nature of exposure to and the subsequent fate and effects of airborne particles leading to a rational framework for standards measurement and control Finally a chapter is added which relates what has been said about aerosols to gaseous and vapour contaminants The book is aimed at graduate students and practitioners in industrial hygiene and other occupational and environmental health disciplines Building Science Series ,1973 *Forensic Laboratory Management* W. Mark Dale,Wendy S. Becker,2014-09-26 New technologies including DNA and digital databases that can compare known and questioned exemplars have transformed forensic science and greatly impacted the investigative process They have also made the work more complicated Obtaining proper resources to provide quality and timely forensic services is frequently a challenge for forensic managers who are often promoted from casework duties and must now learn a whole new set of leadership skills The interdisciplinary and scientific nature of laboratories requires strong leadership ability to manage complex issues often in adversarial settings *Forensic Laboratory Management Applying Business Principles* provides laboratory managers with business tools that apply the best science to the best evidence in a manner that increases the efficiency and effectiveness of their management decision making The authors present a performance model with seven recommendations to implement illustrating how forensic managers can serve as leaders and strategically improve the operation and management in scientific laboratories Topics include Key business metrics and cost benefit analyses Ethical lapses why they occur possible motives and how problems can be prevented Forensic training education and institutes ISO IEC 17025 accreditation implementation The book includes case studies simulating a working laboratory in which readers can apply business tools with actual data reinforcing discussion concepts Each chapter also includes a brief review of current literature of the best management theories and practice The downloadable resources supply two mock trial transcripts and associated case files along with PowerPoint slides from Dr George Carmody s workshop on Forensic DNA Statistics and Dr Doug Lucas s presentation on ethics Dynamical Cognitive Science Lawrence M. Ward,2002 An introduction to the application of dynamical systems science to the cognitive sciences *Dynamical Cognitive Science* makes available to the cognitive science community the analytical tools and techniques of dynamical systems science adding the variables of change and time to the study of human cognition The unifying theme is that human behavior is an unfolding in time whose study should be augmented by the application of time sensitive tools from disciplines such as physics mathematics and economics where change over time is of central importance The book provides a fast paced comprehensive introduction to the application of dynamical systems science to the cognitive sciences Topics include linear and nonlinear time series analysis chaos theory complexity theory relaxation oscillators and metatheoretical issues of modeling and theory building Tools and techniques are discussed in the context of their application to basic cognitive science problems including perception memory
